

Section 1.2 Quick Check Questions

Provide Answers to the following question about HTML

1. Specify the code you would enter to mark the text The J-Prop Shop as an h1 heading and the text Product List as an h2 heading. Add code to group these two headings so browsers recognize them as a heading and subheading, respectively.

[5]

```
<!DOCTYPE html>

<html>

<head>

<body>

<h1>The J-Prop Shop</h1>

<h2>Product List</h2>

</body>

</head>

</html>
```

2. Specify the code you would enter to mark the text Hamlet by William Shakespeare as an h1 heading, with a line break after the word Hamlet.

```
<!DOCTYPE html>

<html>

<head>

<body>

<h1>Hamlet<br>by William Shakespeare</h1>

</body>

</head>

</html>
```

3. Create an ordered list of the following items: Packers, Bears, Lions, Vikings

```
<!DOCTYPE html>

<html>

<head>

<body>

<ol>

<li>Packers</li>
```

```
<li>Bears</li>
<li>Lions</li>
<li>Vikings</li>
</ol>
</body>
</head>
</html>
```

4. Specify the code to access the CSS style sheet file uwstyles.css. Where should you place this code within an HTML file?

```
<!DOCTYPE html>
<html>
<head>
<body>
<link rel = "stylesheet"
href = "uwstyle.css"
</body>
</head>
</html>
```

5. Mark the graphic file portrait.gif as an inline image, setting the dimensions to 250 pixels wide by 300 pixels high. Specify the text David Vinet as alternate text to be displayed in place of the image for non-graphical browsers.

```
<!DOCTYPE html>
<html>
<head>
<body>
<img src = "portrait.gif"
Alt = "David Vinet"
style = "width": 250px; "height": 300px
</body>
</head>
</html>
```
