

DEPARTMENT OF INFORMATION TECHNOLOGY

Information Management 2

INM 260/261/262S

Term 4 Assignment: Group Project

Due Date: 22nd October 2021

Project Specification

The Brief

The project is divided into two sections, the first section involves writing a report on the application of SQL and the learnt experiences, while the second involves the writing of SQL statement queries for a set of ERD diagrams made available to each groups.

You will be assigned to a group with a maximum of 4 members.

A member of the group must be appointed as coordinator, who will be responsible for the submission of the assignment.

All students must contribute their quota to the assignment in both sections 1 and 2.

Confirm that you have been assigned to a group, otherwise report to the subject coordinator latest by **29th of September 2021**.

Section 1 (The Project Report)

Write a report on lessons learnt by your team on SQL in the course of your study and during this project.

Report structure: Do not write your report in bullet points!! Use the headers as your headings with sub-headings.

- Include an introduction that covers the historical evolution of modern-day SQL
- Research and make a presentation on the importance of SQL is in modern computing in the main body.
- Highlight your reflections on what you've learnt about SQL and the value of LinkedIn learning in your journey in the course.
- Also include a well-summarized conclusion, a reference list with a minimum of 6 sources for the report and a page with minutes of your team meeting and activities.
- The report must be limited to 8 pages including a table of content and minutes, excluding the cover page and plagiarism declaration signed by all members.
- Ensure that the write up is **NOT plagiarized or reproduced from any original source**.
- The report must be well-formatted and presented with good language and grammatical structure, cohesive and logical exposition reflecting original thinking is encouraged.
- Avoid personalization of your writing, use proper syntax to present your report.

Section 2 (SQL Query Statement)

- Each group will receive an Entity Relation Diagram (ERD) for the application that your project will be based on.
- You are expected to discuss the diagram amongst your group members to gain more insight into the scenario depicted in the diagram.

Once you have understood the diagram, you will then be expected to;

- **Create, populate** and **manage** a database based on the scenario of the ERD diagram provided. To accomplish this, you are required to use any database tool/platform (**Your query must run on SQLite Browser, this is the prescribed platform for the project**). It is important that you take note of the sequence in which you do things especially when using the CREATE TABLE and INSERT statements. For example, you cannot insert an employee in the employees table if the referenced department does not exist in the department table. Thus, you will need to first create the relevant department number in the department table and then only insert the employee in the employee table. (Table must have a minimum of 10 entries 8 fields).
- You will also need to code an **UPDATE** statement for a bridging table and a **DELETE** statement for a different table.
- REMEMBER; to **reset the data** in those tables **to their original states after testing** the UPDATE and DELETE statements. This is important since it will allow your lecturer to be able to run those commands successfully. Failure to do so will generate a NO DATA FOUND error and you will **lose those marks**.
- Present your SQL statements in **one NOTEPAD document**. Avoid using MS-WORD which uses smart quotes since this makes it difficult to apply your statements correctly.

The Rules

- This is a **group project**. Please ensure that details of all group members (student number, first name and surname) are recorded.
- Upload your **single NOTEPAD document** to Blackboard. The submitted file will be executed against an Oracle database as a script file. The script file must create all the tables and data as specified as well as perform the data manipulation. If you submit more than one file, **only one file will be executed**.
- For NO DATA FOUND errors on the UPDATE and/or DELETE will result in **a score of zero for those statements**.
- The submission link will be on the blackboard. The due date is on the **22nd of October 2021**.
- **By implication, the two deliverables must be documented separately and attached individually using the link provided, in a single submission.**
- The PROJECT report must be in **PDF**, while the SQL query must be in **NOTE PAD!**

Document Requirements for Project Report

- Must have a **Front Cover** with **Group details** and corresponding tasks completed by each member on a separate **Assignment task page**.
- Font: Arial, Tahoma, Verdana. (Choose one and use it across the document)
- Font size: 11 for body content; 12 bold for headers.
- Spacing: 1.5 lines.
- Must have an Automated Content Page.
- All diagrams and tables must be Captioned with the Word Captioning facility (underneath)
- Table of content, task assignment page, front page and plagiarism declaration page should not have any header and footer information.
- Document must have relevant header and sub-headers numbered sequentially
- Page numbering must start at the Introduction and should be at the bottom of the page.

A plagiarism declaration signed by all members of the group must be included as part of the document on the last page.

No instance of plagiarism; copy and pasting from any source will be tolerated.

In the event that plagiarism is detected, ZERO marks will be awarded for the whole submission and further disciplinary penalties may be imposed!
