University of Technology

Course	Professional Practice 3
Course code	PFP360S/PFP361S/PFP362S
Lecturer	N. Wessels
Internal Moderator	G. Hartman
External Moderator	N. Mabuto
Faculty	Informatics and Design
Department	Information Technology
Programme	National Diploma: Information Technology

Topic assessed	Academic writing and research: compiling a literature review
Assessment 4	Literature review
Total	100
Weighting	30%
Submission date	Friday, 21st October 2022 Upload to BlackBoard only. No emailed submissions allowed.

Scope:

The purpose of the **literature review** is to illustrate your knowledge of what others have discovered before your own investigation. It grounds your study in a particular context of what *is known* about a topic and provides a foundation for your question being researched.

Now that you have provided a general overview of your selected topic in your term 3 presentation, compile a literature review in groups of TWO that addresses a particular question within that field of research. Select one of the research questions below for your literature review:

❖ Please select **ONE** of the following:

1.	What is the value of ethical reasoning in cyber ethics in addressing bias in AI algorithms?
2.	Do the bias in AI algorithms reinforce structural racism?
3.	What is the impact of machine learning bias in society and why is it important to address it?
4.	Can automation contribute to a sustainable environment?
5.	Fake news laws versus freedom of expression: Is it possible to combat disinformation while protecting free speech?
6.	What are the factors that lead people to believe in disinformation on social media?
7.	How can social media algorithms improve truth discernment?

Remember that the entire point of writing a literature review is to **synthesize**, or write about *the relationships between*, the articles you're using, defining the connections between them and explaining how they come together to represent a body of knowledge on a subject.

Instructions:

- ❖ Read to familiarise yourself with the topic and obtain a general overview of the main ideas and theories in the field.
- ❖ Working in pairs of TWO, compile a literature review that provides an overview of recent research focused on your chosen topic. Write a review of the literature directly related to your topic. In the body, move from a general, wider view of the literature being reviewed to the specific focus of your research (the **research question** selected above).
- ❖ Narrow your research towards the **research question**. This question specifically describes what you would like to know about this topic.
- ❖ Use a minimum of 6 **credible** sources. At least 3 of these sources must be obtained from articles **published in journals**.
- ❖ Correctly reference all sources using the **Harvard Method** (in-text referencing and reference list).
- ❖ Length: min – 3 pages; max – 4 full pages, excluding cover page and reference list.
- ❖ ONLY type in Arial font 12 with 1.5 line-spacing.

- ❖ Use the cover page on this assessment brief as your own cover page. FILL IN YOUR **NAME, STUDENT NUMBER, AND STREAM CODE (360S/361S/362S)** IN THE TABLE PROVIDED ON THE COVER PAGE. Also fill in the CODE relevant to your stream (360S/361S/362S).
- ❖ Upload by the deadline to BlackBoard only. Only one group member must upload the review. No multiple uploads. No emailed submissions allowed.
- ❖ Late submissions = minus 10% per day.
- ❖ See the RUBRIC right at the end for mark allocation.

Your review article must be formatted as follows:

Introduction

1. State the topic and research question for the review;
2. Provide the context for the research (why is this topic important in the broader field);
3. Explain the organisation – i.e. sequence/themes – of the review;
4. State the scope of the review – i.e. what is included and what isn't included.

Main body

1. Organise the literature according to common themes (see class notes);
2. Provide insight into the relation between your chosen topic and the wider subject area e.g. between obesity in children and obesity in general;
3. Move from a general, wider view of the literature being reviewed to the specific focus of your research.

Conclusion

1. Briefly summarise the important aspects of the existing body of literature;
2. Identify significant flaws or gaps in existing knowledge: was your research question adequately answered by existing research?
3. Based on this, outline areas for future research.

REMEMBER TO....

- ❖ Search for and select **credible** literature that relates to your topic and is framed by your question using the guidelines provided in the class notes. WorldCat and EbscoHost are examples of good databases.
- ❖ Use the literature to build a logical argument (and not a library!) that illustrates your ability to engage in a dialogue with the literature. This means using **your own voice** to actively interpret the literature and to explain that interpretation to the reader. Do not simply describe or simply list what others have written!
- ❖ Group articles into thematic clusters and proceed in a logical order from cluster to cluster. See class notes for examples of types of themes/subtopics.
- ❖ Use linking words!
 - Relational or linking words and phrases are important. For example, if you are grouping together writers with similar opinions, you would use words or phrases such as: *similarly, in addition, also, again*.
 - More importantly, if there is disagreement, you need to indicate clearly that you **are aware** of this by the use of linkers such as: *however, on the other hand, conversely, nevertheless*. Please see class notes for more examples of linking words/phrases.
- ❖ Use language that is appropriate for an academic literature review. Reading many articles will greatly assist you in becoming familiar with the style and tone of such articles.

Good luck!

(See rubric attached below).

RUBRIC: Literature Review

Criteria	Poor	Satisfactory - Good	Excellent	Mark
Problem Statement/ Introduction	Did not reference the topic to be examined.	Presented the topic and the research need.	Topic is clearly defined and context for research provided.	
	0 – 4.9	5 – 6.9	7 - 10	
Organised progression	Report has no clear direction and subtopics not connected.	Basic flow of ideas but not all sections follow a logical order.	Report goes from general to specific; transitions relate sections.	
	0 – 4.9	5 – 6.9	7 - 10	
Content Coverage	Inadequate use of sources/inadequate coverage of sources used/significance to field not clear.	Appropriate sources included but not covered in adequate depth; significance of selected resources discussed.	Appropriate sources examined and covered in depth.	
	0 – 9.8	10 – 13.8	14 - 20	
Synthesis of Ideas	Did not attempt to synthesise the information (did not identify relationship among sources: connections/ similarities/ contradictions etc.) or discuss the topic in the broader context of the literature.	Some analysis and synthesis of ideas (inferred some connections/similarities/ contradictions etc.); discussed the history and relationships among key points found in the literature.	Clear analysis and synthesis presented (inferred relationship among sources); demonstrated insight into problem; conclusions strongly supported.	
	0 – 9.8	10 – 13.8	14 - 20	
Clarity of Writing	Ideas not expressed clearly; misspellings, incorrect grammar and punctuation.	Writing is clear but not concise; paragraphs or sentence structure repetitive or awkward. Some spelling and/or grammar errors.	Writing is clear and concise; ideas are well-developed and coherent. Minimal spelling and/or grammar errors.	
	0 – 9.8	10 – 13.8	14 - 20	
Citations/ References	Sources were not cited in the text and/or corresponding reference list.	Citations within text and corresponding reference list were included with some formatting problems.	In-text citations and reference list citations were complete and properly formatted in the Harvard Method .	
	0 – 9.8	10 – 13.8	14 – 20
