

WORK INTEGRATED LEARNING (WIL) PROGRAMME

NAME OF COMPANY/PROJECT:		Graduates Recruitment Portal	
WEEK	FROM	TO	
	[22/08/2022]	[26/08/2022]	
TUES	On this day, I did some research on detailed dataflow diagrams. These dataflow diagrams are named level 2 DFDs. I re-evaluated my previous level 0 diagram to refresh my memory regarding the entire process that I am supposed to model in detail now. The focus this time was not on the manual process of how the process gets carried out but on how the system will carry out the process and the information.		
	I then opened Figma, a drawing tool our technical supervisor, MR Hendricks recommended we use. I was fortunate enough in terms of experience with the tool at hand, I am quite fond of Figma because it is my go-to tool for designing & prototyping user interfaces. I have been using it for the past two years before I moved from Adobe XD so drawing the Dataflow Diagram was not an issue		
	I then began drawing the level 1 DFD, to create a foundation and an easy way of thinking since we human beings do things in a very abstract manner. A level 1 DFD is a lot more detailed than a level 0 DFD, but it is still abstract because it shows all the inner main processes that will be receiving and processing data. Though, level 1 DFDs hide the inner processes of these main processes introduced in the level 1 DFD. After finishing the level 1 Diagram I went to the group, my group. We decided to divide ourselves into a group of 4 since there is a total of 32 of us. The reason behind this decision was to make our job easier when we had to pick a diagram that we'll use to present to Mrs Abrahams on Friday in the meeting. For each group, each individual member will draw his diagram and present it to their group then they pick one which they think best represents their group. That diagram will then be presented in our meeting on Thursday then we finally pick one that we will present on Friday.		
	As soon as I showed my team members my level 1 diagram, I started working on the level 2 diagram with the help of the level 1 diagram. It was a lot easier thinking about the inner process of an already modelled process and its data. I now had to expand on the processes and show the important inner processes from the abstract processes. Surprisingly, making the level 2 diagram was a lot quicker than I thought. It took me almost an hour to make the level 1 diagram but, it took me roughly 50 minutes to complete my level 2 diagram. I then exported the diagram and sent it over to the group. We then decided to sleep on our diagrams to give each other time to digest the diagrams and then vote for the one we think will best represent our mini-group of 4.		
WED	On this day in the afternoon, I re-opened by DFD and I found a few errors that I needed correct and double-checked it and it looked good. I then sent the newly updated diagram to the group. Before the voting took place, I noticed that my colleagues had a job management process in their diagram which was missing in my diagrams. I was puzzled as to why do they have that in there because Mrs Abrahams said that they are not a recruitment agency. I learned that I missed a few details when I was writing down the process on the very first meeting, we had. Apparently, as of now, there is only one company that is allowed to post a job advertisement which then allows graduates to apply directly on their own for the open position.		
	I had to update both of my diagrams for the second time and add the job advertisement process.		
	Then finally in the evening, the voting began, and they voted for my diagram to represent our little group.		
THUR	On this day in the evening, we had our meeting with everyone. Just like last week's meeting, only 12 people came to the meeting. Out of the 12 people we had, only 3 of us presented our diagrams. Some said they did theirs but could not finish but we did not see the unfinished diagram, so it is uncertain whether they really did do it or not. Some could not do the diagram for various reasons while some it is unknown whether they attempted at all.		
	We then addressed the issue of people not attending the meetings and we figured maybe it is because we hold the meetings in the evening and people might not like that and are just quiet about it. We decided to hold the meetings in the morning at 10 in the morning. We also discussed the idea of requesting a meeting on Thursday with our technical supervisor Mr Hendricks on getting feedback on things like the diagram we choose to present to Mrs Abrahams. We are all juniors, so we somehow find ourselves questioning our decisions on whether it is the right diagram or not. Is it too complex? Is it too detailed? Does it have enough detail? Etc. But we did not reach a final decision on this matter.		
	We then needed to vote for the diagram that will be presented to Mrs Abrahams on Friday but then we had very little people in the meeting. Only 12 and half of them weren't participating in the meeting so it is uncertain whether they were there, or they joined and left their computers alone. I then recommended we take drastic measures and ring a group call in our WhatsApp group to get the attention of almost everyone. It worked, the voting began, and a number of people voted, at least more than half voted. My diagram was chosen for this week's presentation. We then had to decide who should present the diagram because I couldn't present since I presented my previous diagram. Mr Haines came forward and volunteered to present the diagram. I then had to brief him on the diagram. How the flow of the diagram was designed. I		

WORK INTEGRATED LEARNING (WIL) PROGRAMME

	tried my best to make the diagram self-explanatory with the flow going from the left to the centre where the database was and to the right where the processing and outputs were situated.						
FRI	On this day, we had a meeting with the client Mrs. Abrahams. Mr Haines presented the Data Flow Diagram The presentation went well. Some new requirements were brought forward by Mrs Abrahams, and we discussed them. I also got to clarify some things I did not understand clearly.						
	The meeting was a lot more organized this week. Though participation was still lacking.						
	After the meeting I then began writing my logbook for this week.						
MENTOR EVALUATION	RATINGS (tick the relevant box)					STUDENT REFLECTION	
EMPLOYABILITY SKILLS	Requires Improvement	Inconsistent	Marginal	Competent	Excellent	EMPLOYABILITY SKILLS	
	1	2	3	4	5		
COMMUNICATION SKILLS						COMMUNICATION SKILLS	This week I did not experience any communication issues or barriers. I think I also got through to everyone I spoke to regarding the project and my ideas and solutions to problems were communicated clearly to my colleagues
PROBLEM SOLVING SKILLS						PROBLEM SOLVING SKILLS	Our meeting on Thursday suffered from lack of participation to an extent that we had to run a group call to force people to vote since they did not attend the meeting. I recommended the idea and it worked; we got votes so I am considering it a win on our problem. I also encountered an issue with my level 2 diagram while I was drawing it. It was getting a lot more complicated, and it did not have direction.
							I then decided to make some kind of flow that the information inputs and their processes will strictly be on the left side of the diagram, database at the centre and the outputs and processes that depend on the information that comes from the database on the right. It solved the difficulty of reading issue. Unfortunately, the complexity issues could not be resolved. It cannot be helped; research has proven that software gets complex as new features are added. This goes the same for diagrams and documents of that software.
DECISION MAKING SKILLS						DECISION MAKING SKILLS	
TEAMWORK SKILLS						TEAMWORK SKILLS	Teamwork has not improved in our group. It's always the same people participating over and over and over again. The girls in the team are worrying me. They hardly participate or rather never participate.

WORK INTEGRATED LEARNING (WIL) PROGRAMME

							At least in this week's meeting on Thursday, one girl came forward and said that she is afraid that her diagram was clumsy and complicated. We were happy that at least one of them spoke today, maybe next week she will have the courage to present and one more will join in on the fun.
TECHNICAL SKILLS						TECHNICAL SKILLS	This was my first-time making diagrams using Figma, so it was a great experience and my diagrams turned out great. I usually go for Visual Paradigm for Diagramming. I thought Figma was for user interface designing and prototyping only. I neglected the fact that in general, at its core, it is a drawing tool so it can pretty much make any drawing.
