

FUNCTIONAL REQUIREMENTS

GRADUATE RECRUITMENT PORTAL
PROJECT

Purpose

The purpose of this document is to present a detailed description of the Graduate Recruitment Portal. It will explain the purpose and features of the system whereby it will give an overview of the functional requirements and non-functional requirements of the portal. Followed by a use case diagram of the system demonstrating each functionality of stakeholders. In addition to this a brief explanation of user stories will also be discussed and made clear. This document is intended for both stakeholders and developers of the system and will be proposed to the client for its approval.

The purpose of the project is to manufacture a graduate student portal for CPUT (Cape Peninsula University of Technology) that is a portal where students that have graduated from CPUT can send their CVs through CPUT to get a job in the student line of study. The design of the portal is to make the recruitment officer's job easier and more convenient to send the student's CVs to the correct businesses. The portal will mainly be a WordPress application (Web-based application) and consist of different databases, these databases will break down into smaller, manageable databases for the recruitment officer to gain easy access to them.

Project Description

The project is to provide a portal system where CPUT students that have graduated at CPUT and are not placed in the industry of their study for a period of 3 years after graduating, can send a PDF CV to the portal. The system administrator (Ms. Abrahams) will review the uploaded PDF CV Ms. Abrahams the system administrator forwards the specific CVs to a company requesting a graduate student for a job opportunity.

User stories

Story #1

Story Name:

Admin/User Authentication & Authorization

Description:

As an admin, I want to insert my authentication details every time I try to access the system so that I can prevent unauthorized access to the information.

Acceptance Criteria

- Can users access the system if they are not using a CPUT email address?

Story #2

Story Name:

Admin User Registration

Description:

As an admin, I want to create new user accounts that have the same privileges as the admin so that they can use the system as admins in my absence.

Acceptance Criteria

- Can admin create users who are not CPUT employees as admins?
- Can the admin create users who are not using CPUT email addresses?
- Should a user's password be made up of at least one
 - Uppercase alphabet
 - Special character
 - Number
 - Lowercase alphabet?

Story #3

Story Name:

Graduates Request

Description:

As a recruitment agent, I want to request graduates for open positions in my company so that I can fill the open positions.

Acceptance Criteria

- NaN

Story #4

Story Name:

Direct Job Application

Description:

As a recruitment agent, I want to create a direct job application for students so that they can apply for the open position individually.

Acceptance Criteria

- Is the student a graduate?
- Is the student a CPUT graduate?
- Is the student a graduate who graduated more than 3 years ago?
- Does the student have 2 or more years of working experience in the field?

Story #5

Story Name:

CV/Resume Submission

Description:

As a graduate, I want to submit my cv/resume so that I can get a job in my field.

Acceptance Criteria

- Is the student a graduate?
- Is the student a CPUT graduate?
- Is the student a graduate who graduated more than 3 years ago?
- Does the student have 2 or more years of working experience in the field?

Story #6

Story Name:

Graduate's CV Acknowledgement

Description:

As an admin, I want to acknowledge a graduate's cv by sending out an acknowledgement email so that the graduate knows that I received his/her CV.

Acceptance Criteria

- Is the CV in the required format?

Story #7

Story Name:

Generate Spreadsheet

Description:

As an admin, I want to generate a spreadsheet of the graduate's information so that I can forward it to the recruitment agent.

Acceptance Criteria

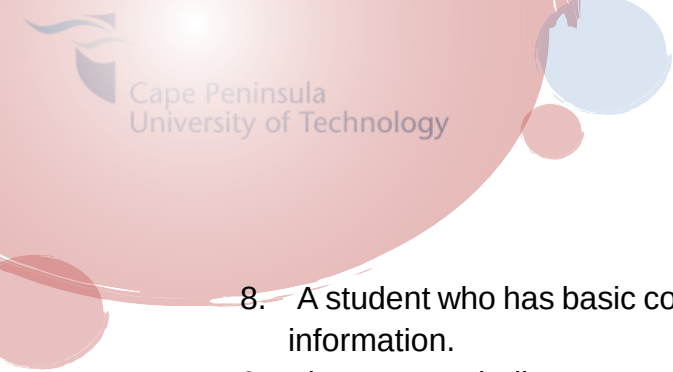

- Did the student agree to allow CPUT to forward their information to recruitment agents?
- Is the recruitment agent in agreement with the POPI Act?

Functional Requirements

1. The system should be able to store user registration and login data on the database.
2. The system should be able to store submitted student CVs.
3. The system should be able to store student demographic data.
4. The system should notify students whether their CVs got acknowledged or not
5. The system should be able to assist students in applying for entry level positions.
6. The system should display available positions to the student.
7. The system should allow students to update their details, including their details on their CVs.
8. The system should capture applicants' details when they apply for positions.
9. The system should notify applicants whether their applications was successful.
10. The system should enable applicants to view their application status.
11. The system should store company details.
12. The system should enable companies to enquire for CVs.
13. The system should allow companies to advertise positions on the website.
14. The system should enable the recruitment administrator to view CVs
15. The system should enable the recruitment administrator to view student demographic details.
16. The system should allow the admin user (recruitment administrator) to grant access to companies.
17. The system should keep the update version of the CVs and delete the old version one.

Non-Functional Requirements

1. When the submit button is pressed, the confirmation screen must load within 2 seconds.
2. Whenever password is reset students will get their confirmation via the email or any platform that has been used.
3. Students after they got confirmation email that means they are done, they can sign-out.
4. After the account is created students they can start using the system.
5. The system shall have a user-friendly interface with only needed features
6. More than one type of user can use the system at a time, specifically the student, andThe admin can use the system at the same time.
7. There is no need for training to use the system.

8. A student who has basic computer knowledge can open the systems and add their information.
9. The system shall protect users not to make any errors when filling in their details.

Use cases

The following use cases have been identified as the key use cases for the system. They have been broken down into diagrams to depict the most common use of the system

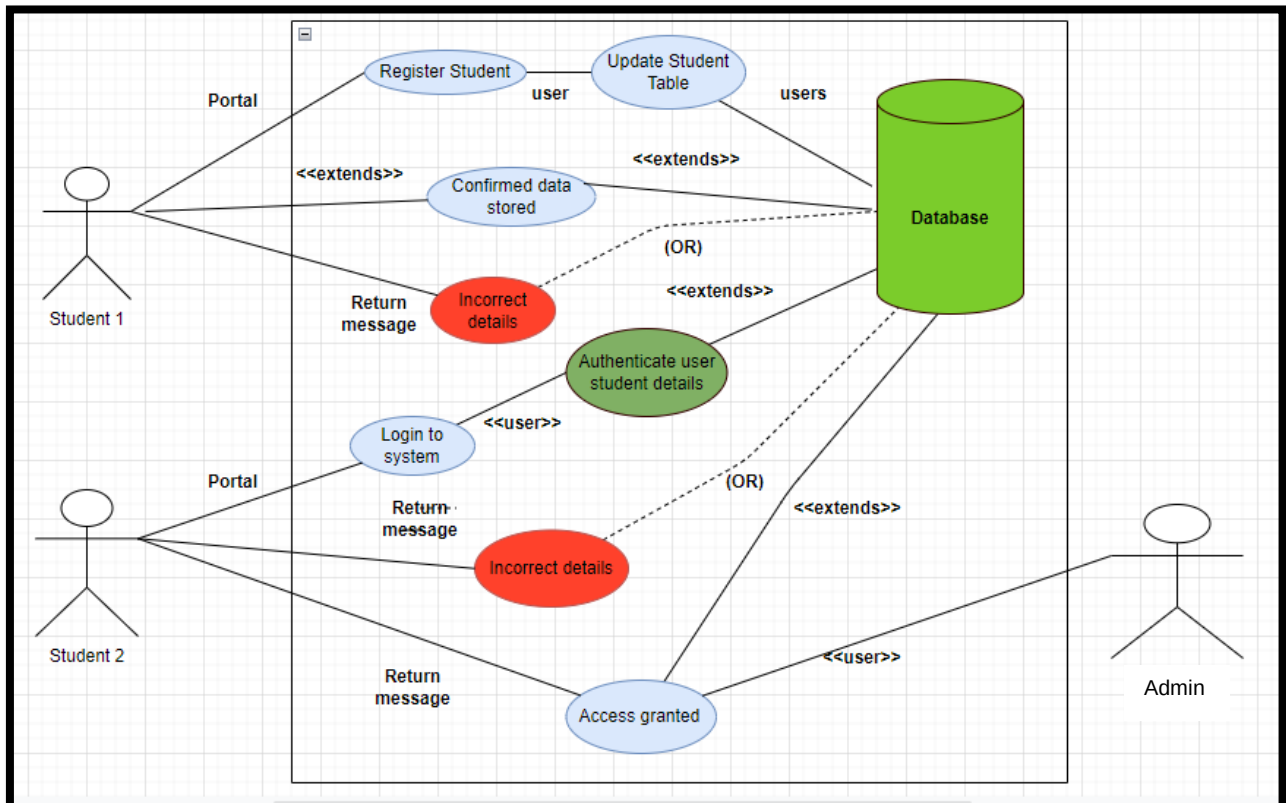

Description of the system user

Actors

Student: The students are the main clients of the system, and they view job vacancies and apply for them, they also view their recruitment status

Company: The employers are also very important. They are responsible for posting job vacancies on the site and selecting qualified candidates.

Use case illustrates the student registering for the first time within the system and the response given. It also illustrates the exception if the details are not correct. Furthermore, it illustrates the login process after registration and the exception if student details are incorrect.

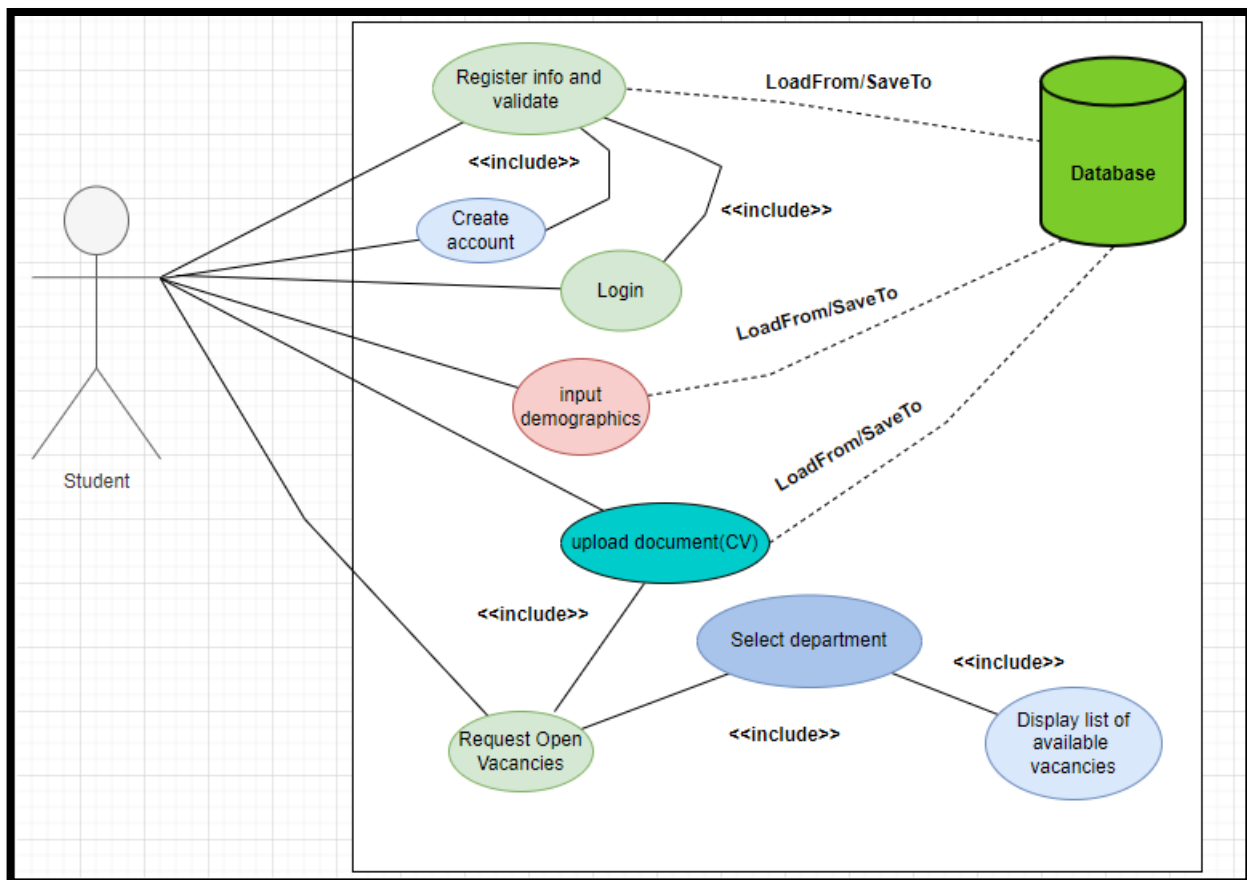

Login/Logged in

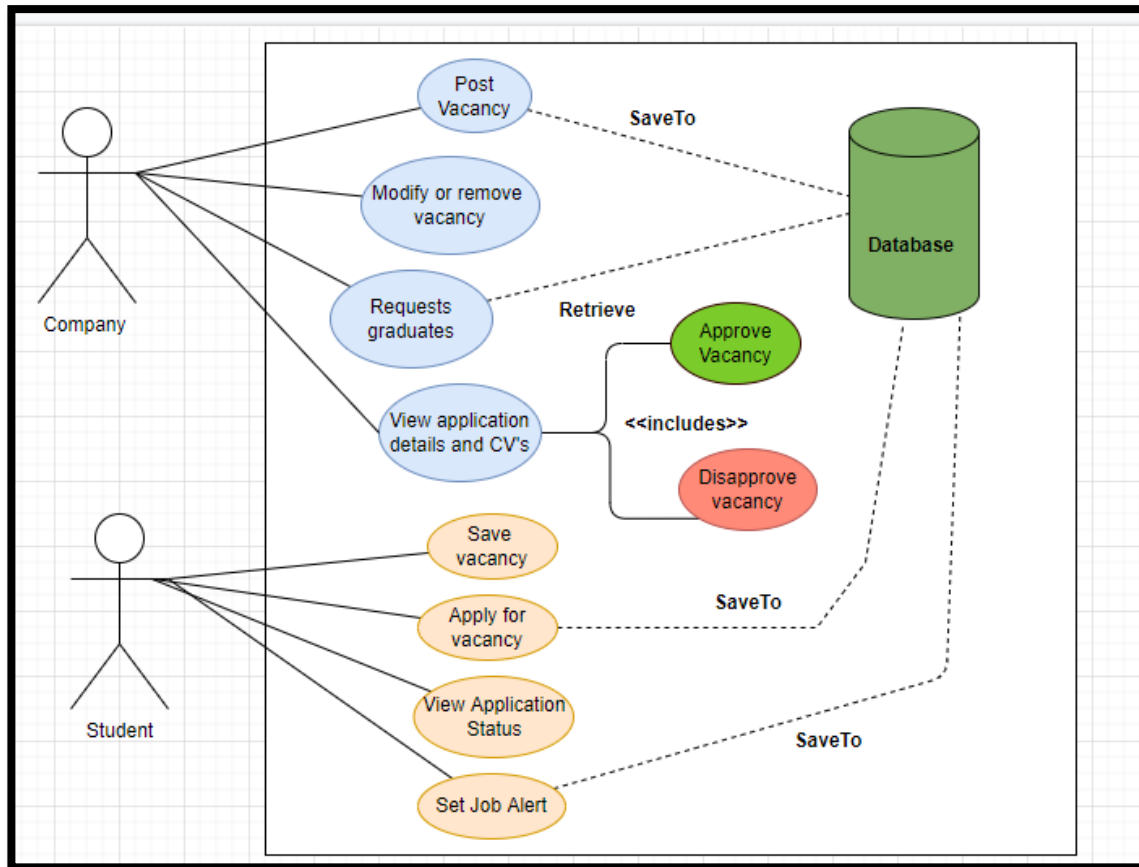

Registered students can log in to their accounts. Logged students can carry out activities on the portal furthermore students can log out of the portal whenever they wish.

New students on the portal that wishes to become regular users can register themselves to get a better experience. They will need to fill out a registration form providing their details and creating a username and password. After registration, the user can carry out any type of activity on the website.

2. Student input demographics, upload resumes, and request work

3. Company requests graduates and students to apply

Security

Another significant constraint is security, which arises from the fact that the system will store personal information about students as well as other sensitive information that must conform with the POPI Act. To ensure the integrity of the system, the development team would need to have specialist knowledge to design and construct the system by the POPI Act.

The following are types of security required. We can secure our system in the following ways:

- Use HTTPS-enabled Graduate Recruitment System to improve data security:
- HTTPS is the secure version of HTTP, a protocol that is used to send data from a browser to a website over a network. As most of our work is now done online, this is a basic requirement of any recruitment system.
- Cloud-Based Physical Access Control: Cloud-based access control provides us with a strengthened security system without hindering graduates.
- This system will be protected by implementing a Secure Sockets Layer (SSL) technology. This will ensure that there is an encrypted link between the applicants' browser and your server.
- Ensuring that only authorized personnel can access the information that has been submitted to our system.
- Encrypt emails.
