

WORK INTEGRATED LEARNING (WIL) PROGRAMME

NAME OF COMPANY/PROJECT:		
WEEK	FROM	TO
	10 October 2022	14 October 2022
TUES	No work done for this day.	
WED	This day I scheduled a meeting with my group members at 4pm, but it was only for 1 hour 30 minutes. We had to complete the User Interface (UI) Design component of the project, and we used our wireframe design of the previous week. To ensure that we kept a consistent design, we used CPUTs color palette as a reference, the interaction between group members was brief as some had limited ability where designed is concerned. I took the initiative to ensure that group members understood what I was doing and clarified any uncertainties. We rescheduled the meeting for 10pm and ended up concluding 1pm.	
THUR	As per usual the main graduate recruitment portal project group met at 10pm, and each group was given a chance to present their work. There were some students who got the Wireframe and UI Design mixed up, but that was clarified. A discussion was raised around the capabilities and possible limitations that WordPress has, and we arrived at a point where we must schedule a meeting with the server administrator that is hosting the website for us.	
FRI	On this day we had our weekly meeting as the graduate recruitment portal project group and presented our work to Mrs Prima and Mrs Abrahams. Mrs Abrahams had her own concerns about certain aspects of the project, especially where it seemed that she or companies had to do extra work, this translated into her asking questions about the sustainability of the platform as companies forwards pre-designed content that she must post on the CPUT Recruitment Facebook page, and the possibility of the companies not agreeing to uploading the same information to the graduate recruitment portal. She urged us to rethink certain aspects of the design and we confirmed that we'll improve the current design, aiming to improve the sustainability of the site.	

MENTOR EVALUATION	RATINGS (tick the relevant box)					STUDENT REFLECTION	
EMPLOYABILITY SKILLS	Requires Improvement	Inconsistent	Marginal	Competent	Excellent	EMPLOYABILITY SKILLS	
	1	2	3	4	5		
COMMUNICATION SKILLS						COMMUNICATION SKILLS	Understanding and being able to verbally communicate the work to individuals who might not understand it is a task on its own, but thankfully it worked out. My group members were actively communicating with me as we had the sessions, and questions they asked I gave my own insight for why "A" might work, and "B" wouldn't. Making the session productive and interactive.
PROBLEM SOLVING SKILLS						PROBLEM SOLVING SKILLS	When having to design a user interface, a lot must be considered and making the wrong assumptions can cause more harm than good. When we had to translate the color palette into our design we went through a lot of trail-and-error, but we eventually ended up with something we felt comfortable with. Sometimes when you must ask instead of assuming, and Mrs. Abrahams made us aware of that on Friday as she gave us a real-world perspective of what she expects and what she doesn't.
DECISION MAKING SKILLS						DECISION MAKING SKILLS	Decisions was mostly made by me this week as our group didn't necessarily have the sought-after experience that was needed for the required submission, I made the interaction as less stressful as I could and this made the group interact more, our decisions were based on what color should we use, what screen components should be moved or replaced, etc. This made it possible for the group members to learn new aspects of work that we'll most probably do in the future.
TEAMWORK SKILLS						TEAMWORK SKILLS	Our meetings were interactive and gave everyone a chance to discuss their own point of view, and I only intervened if what they are saying wouldn't make sense in the design

WORK INTEGRATED LEARNING (WIL) PROGRAMME

							after I explain and show them why, our interaction this week is applaudable.
TECHNICAL SKILLS						TECHNICAL SKILLS	Designing the user interface in Adobe XD wasn't as difficult as it would've been a year ago, but thanks to me being familiar with the software I made things easier by applying their thoughts into design, where the difficulty came was with the colors as you cannot overdo or under do it, we used to Google Meet to host the session and I used its capabilities to share my screen with my group mates.
