APPLICATIONS DEVELOPMENT THEORY 4

SUBJECT GUIDE FOR:	2025
COURSE CODE:	APT470S

Agile Principle, Practice, and Project Management

Instructions:

- i. *Total Marks: **100 [10 Marks]***
- ii. *Answer all questions individually, but you are free to discuss them in your group (LTD). That is, it is an individual assignment, but collaboration and discussion with peers are encouraged to enhance understanding and insights.*
- iv. *Solutions must be uploaded to Blackboard by **Thursday, April 30, 2026.***

Preamble

Read the attached document: Based on the document "**Agile Project Management — Intuitively and Exhaustively Explained,**" here are 10 scenario-based questions designed for your class section today. Practice and find answers within the text (if necessary, outside the text).

Agile and Scrum Questions

1. **The Three Pillars of Scrum:** A team realizes that for their work to be successful, they must ensure everything they do is visible to the entire group, they must regularly check their progress against their goals, and they must be willing to shift their approach when they discover a problem. **What are these three foundational concepts mentioned in the document? Are they the same as the three pillars of Scrum mentioned in your textbook? If yes, list those mentioned in your textbook. [10 Marks]**
2. **Scrum Values and Theory:** To help a team improve, a manager emphasizes that everyone should be open about their progress and hurdles and remain committed to the project's success. **According to the document's section on the "Core Values of Scrum," what is the primary purpose of these values? What is the Scrum theory? [10 Marks]**

3. **The Daily Scrum:** A team is struggling with meeting fatigue and decides to implement a quick, daily alignment session for the developers to coordinate their work for the next 24 hours. **What is the maximum duration (timebox) of this daily event according to the document? [10 Marks]**
4. **Sprint Planning:** At the beginning of a new work cycle, the team meets to determine what will be accomplished and how it will be done. **Based on the text, what are the three major elements that should be included in a fully defined ticket during this planning phase? [10 Marks]**
5. **Stakeholder Attendance:** A team notices that key stakeholders have stopped attending the end-of-cycle sessions because they feel the meetings are just boring presentations. **According to the document, what should this event be instead of a "presentation" to ensure stakeholders remain engaged and the plan can be adjusted? [10 Marks]**
6. **Sprint Format:** A team finds that their current work cycle is too long, leading to a "fragile" product that doesn't meet user needs. **How does the document suggest changing the "Review" format to better include stakeholder feedback and improve the product? [10 Marks]**
7. **Benefits of Shorter Sprints:** A team is considering shortening its 4-week work cycle. **According to the text, how does a "shorter timescale" for delivery improve the team's ability to discover and address unknown problems?**
8. **Waterfall Momentum:** A project team is following a traditional Waterfall approach and realizes halfway through that their initial plan is flawed. **Why does the document state that "substantial changes" are "practically difficult" to adopt once a Waterfall project has started? [10 Marks]**
9. **The "Fragmented Genius" Concept:** The document describes a mental model where a team is seen as a single "super-genius mind" that has been broken into different people. **Based on this model, what is the primary objective of project management? [10 Marks]**
10. **Time-boxed:** A developer is unsure if a specific technical solution will work and needs time to explore it before committing to the main project. **What is the name of the "time-boxed" ticket used specifically for this type of research? [10 Marks]**
