

The background features a series of concentric circles in light gray, some solid and some dashed, creating a subtle pattern. A dark red speech bubble is positioned in the center, containing the main title text.

Digital Layouts & Image Optimisation

The Layout

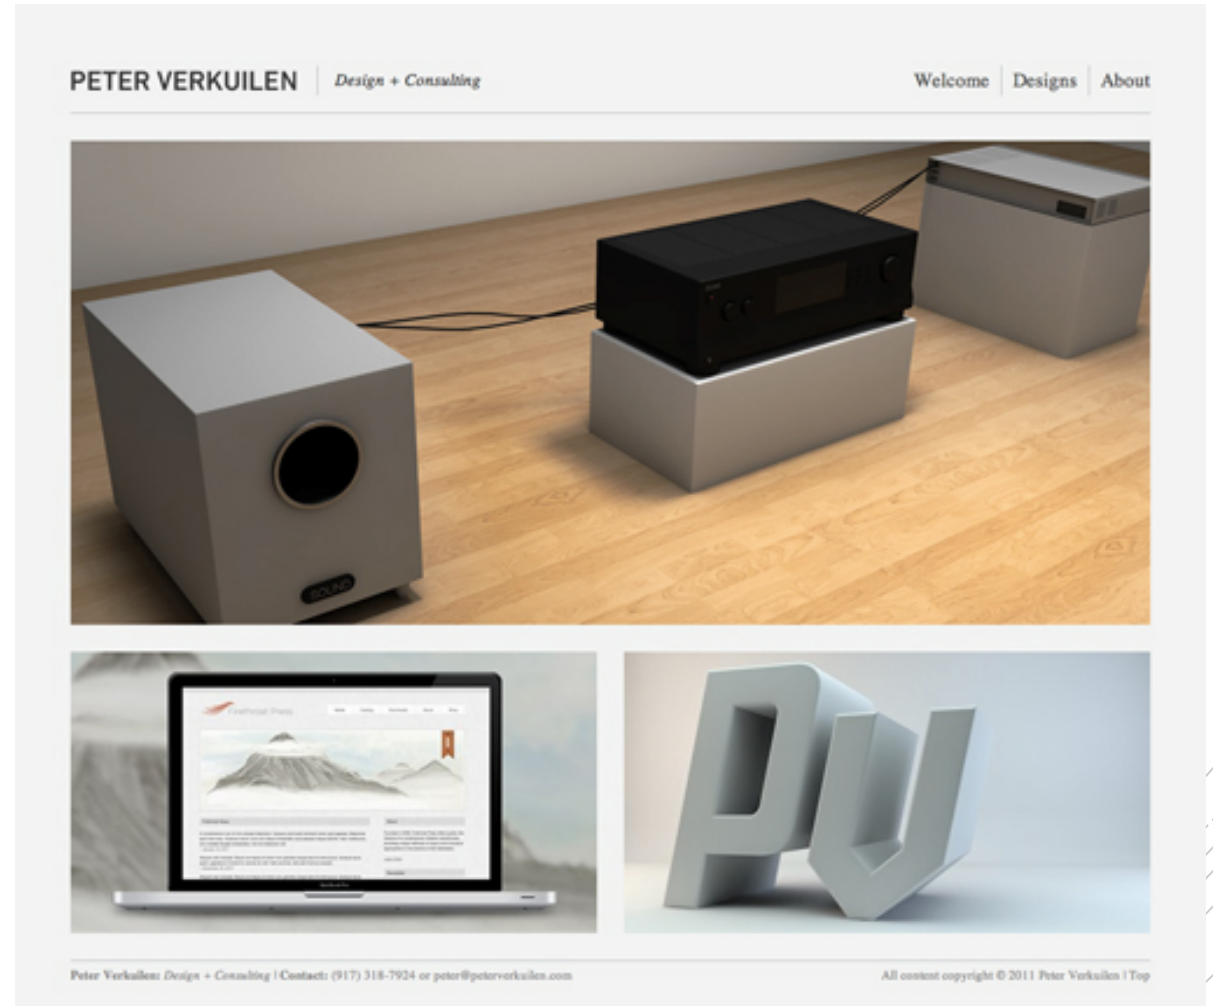

- Layout can both be one of the easiest and one of the trickiest facets of web design.
- Sometimes a designer can bust out an amazing layout in minutes and sometimes that same designer can struggle for the better part of day with the same task.

The background of the slide features several thin, curved lines in a light gray color, some solid and some dashed, creating a modern, abstract design. On the left side, there is a large, dark red rectangular area with a white text box inside it.

3 box layouts

- It's a very simple and clean layout.
- In fact, you'll be tempted to think that it's far too simple to ever fit your own needs.
- The three boxes layout features one main graphic area followed by two or three smaller boxes underneath.
- Each of these can be filled with a graphic, a block of text or a mixture of both.
- The main box in this layout is often a jQuery slider, capable of showcasing as much content as you want!

3 box layout

3D Screenshots

- As developers continue to create an endless collection of Web Apps, the 3D screenshots layout is becoming more and more popular.
- The basic idea is to top your page with a headline and then toss in some stylized previews of your application.
- These often come with reflections, heavy shadows, big background graphics
- the core idea is always really simple.

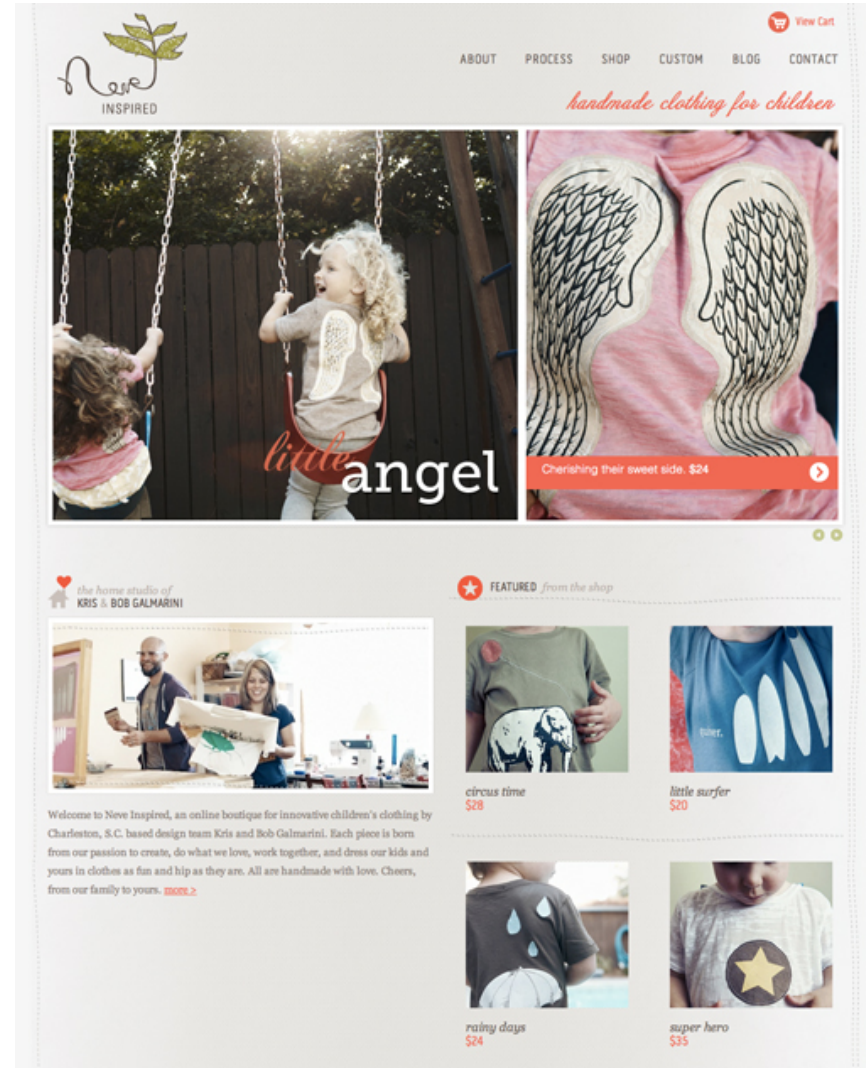

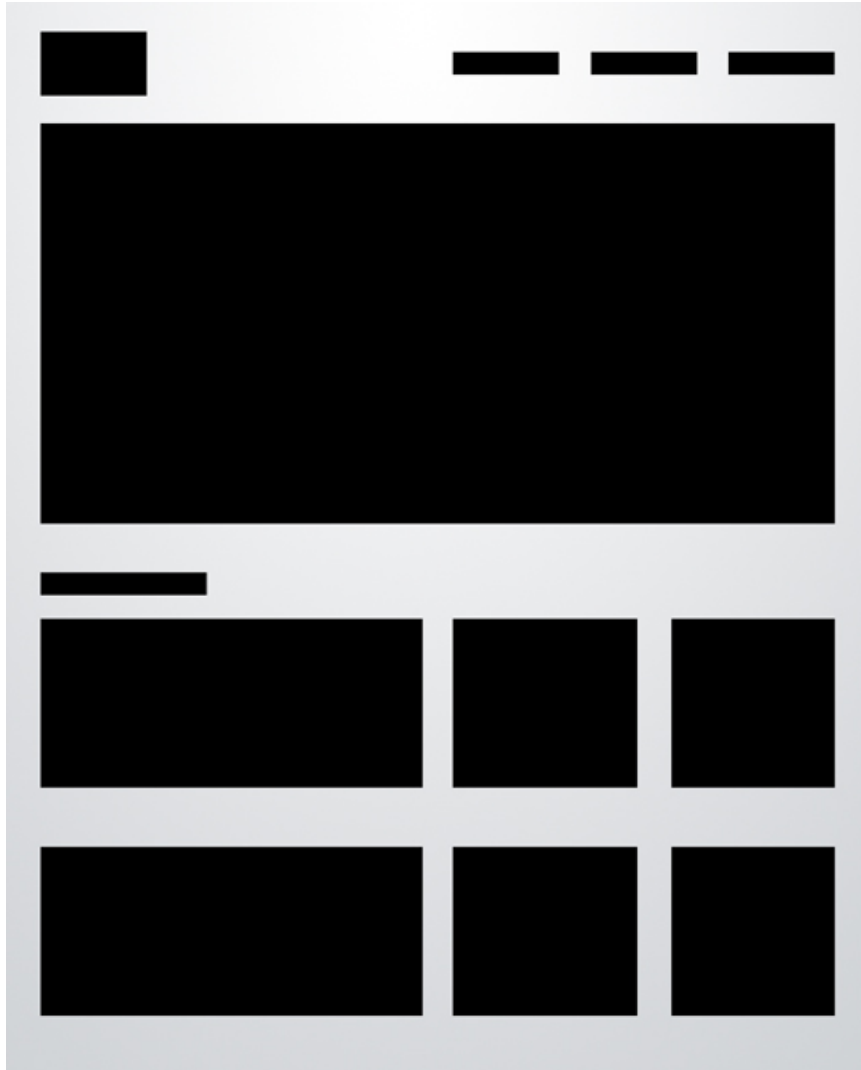

3D Screenshots

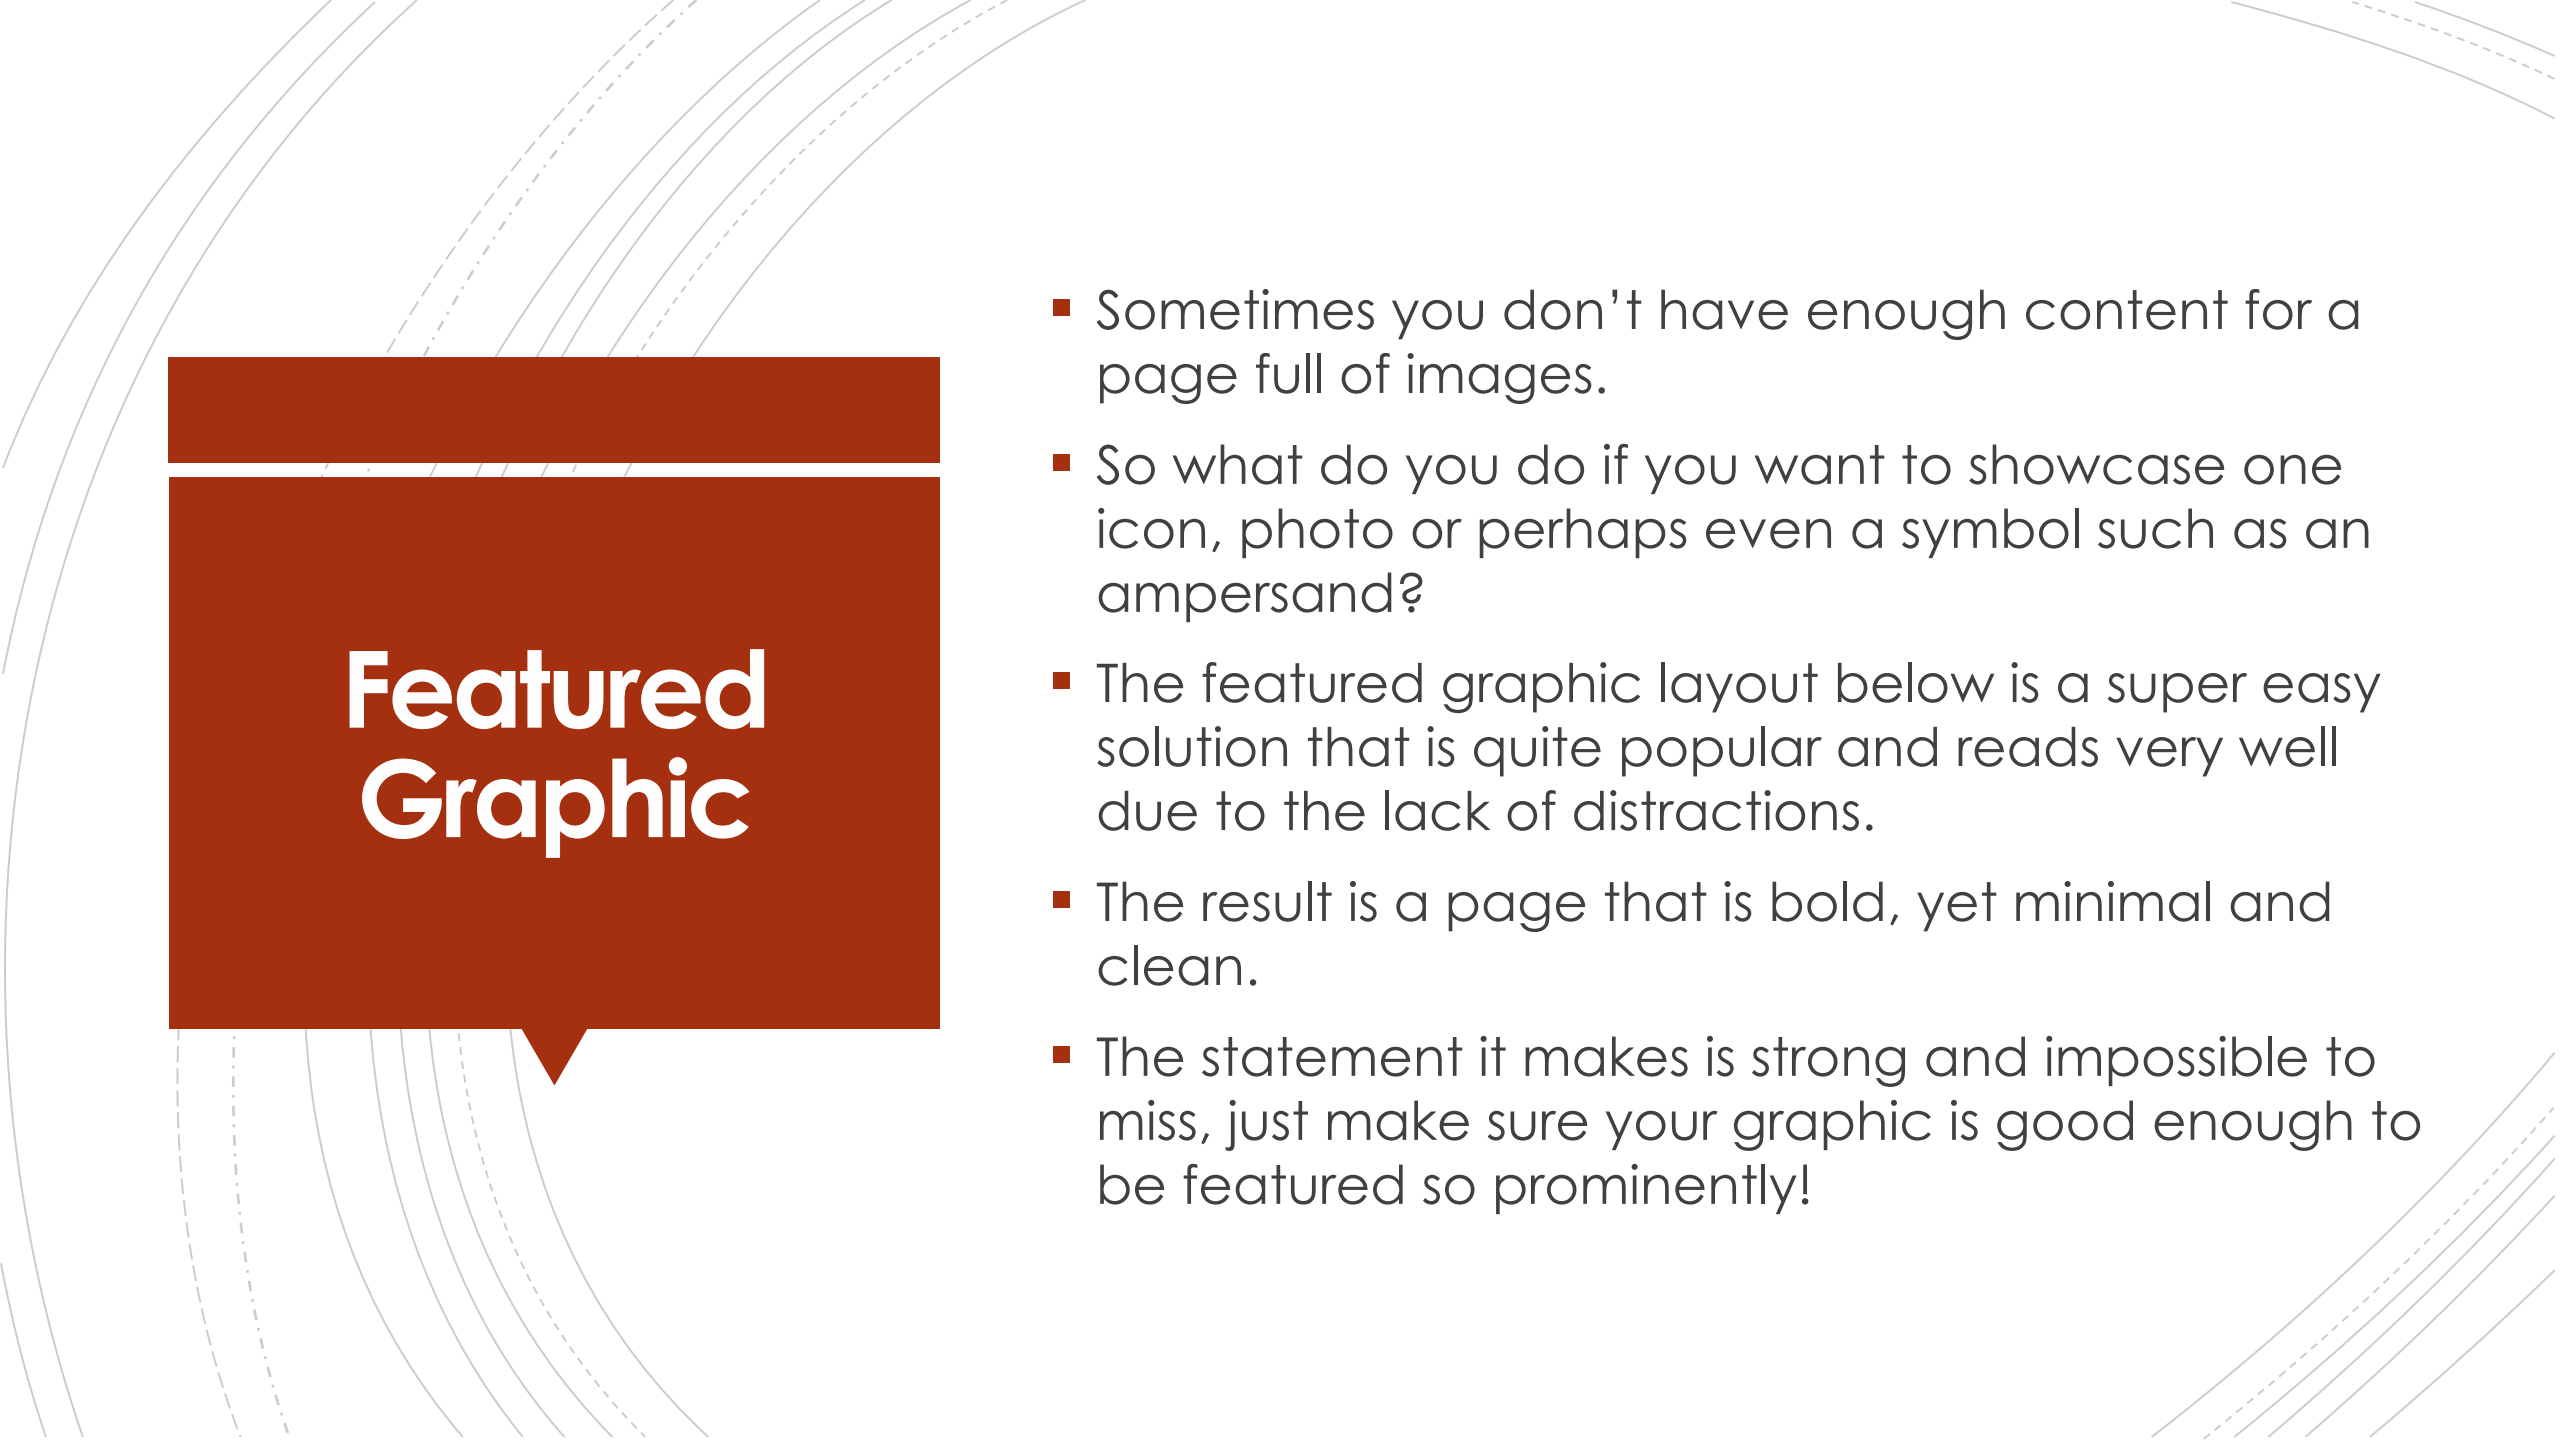

Advanced Grid

- Many of the layouts that you'll see adhere to a pretty strict grid alignment.
- However, for the most part, they don't simply suggest a page full of uniform thumbnails.
- For instance, the advanced grid layout mixes up the size of the images to avoid redundancy.
- As with the three boxes example, there's one primary graphic heading up the page.
- This is followed by a simple twist on the idea of a uniform grid of thumbnails.

Advanced Grid

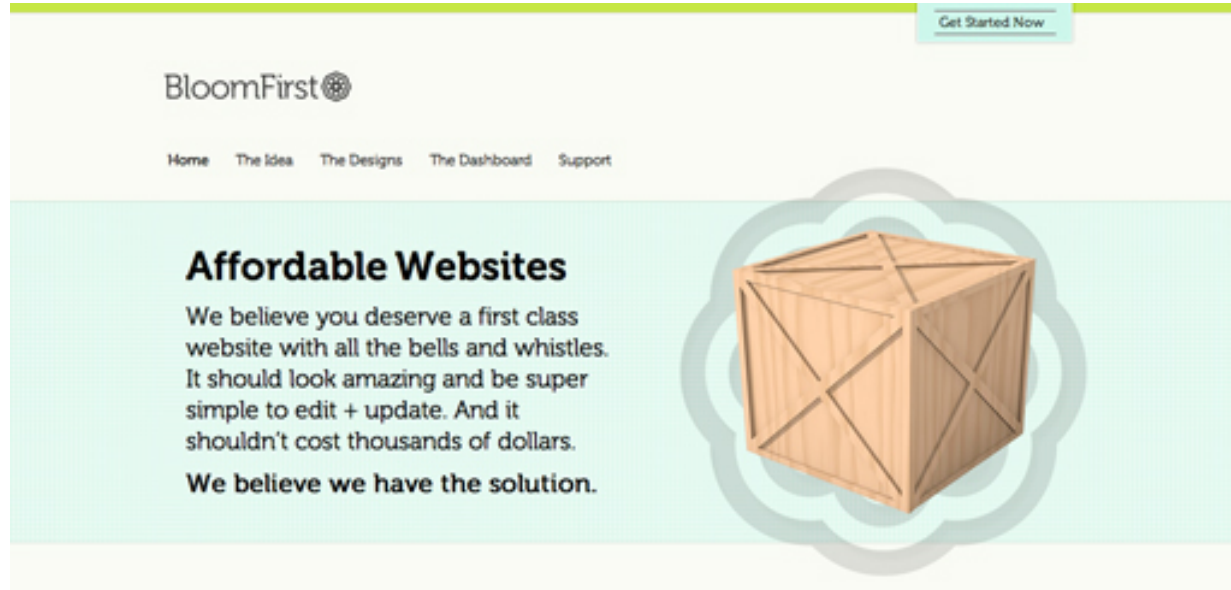

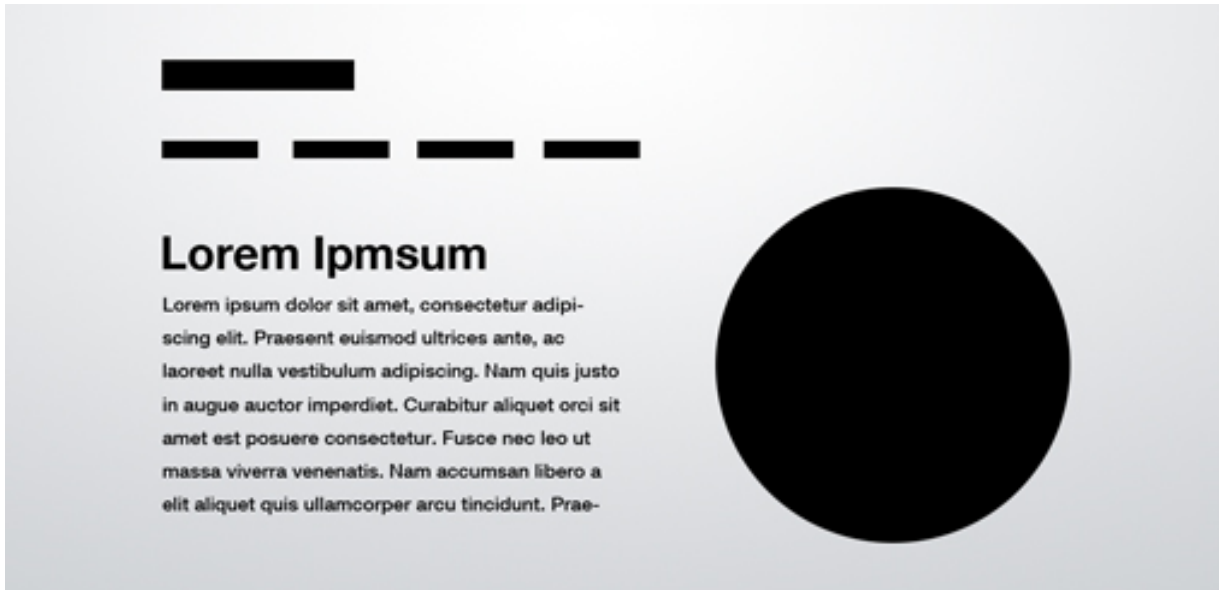

The background of the slide features a series of thin, curved lines in a light gray color, creating a sense of motion and depth. These lines are more prominent on the left side and fade towards the right.

Featured Graphic

- Sometimes you don't have enough content for a page full of images.
- So what do you do if you want to showcase one icon, photo or perhaps even a symbol such as an ampersand?
- The featured graphic layout below is a super easy solution that is quite popular and reads very well due to the lack of distractions.
- The result is a page that is bold, yet minimal and clean.
- The statement it makes is strong and impossible to miss, just make sure your graphic is good enough to be featured so prominently!

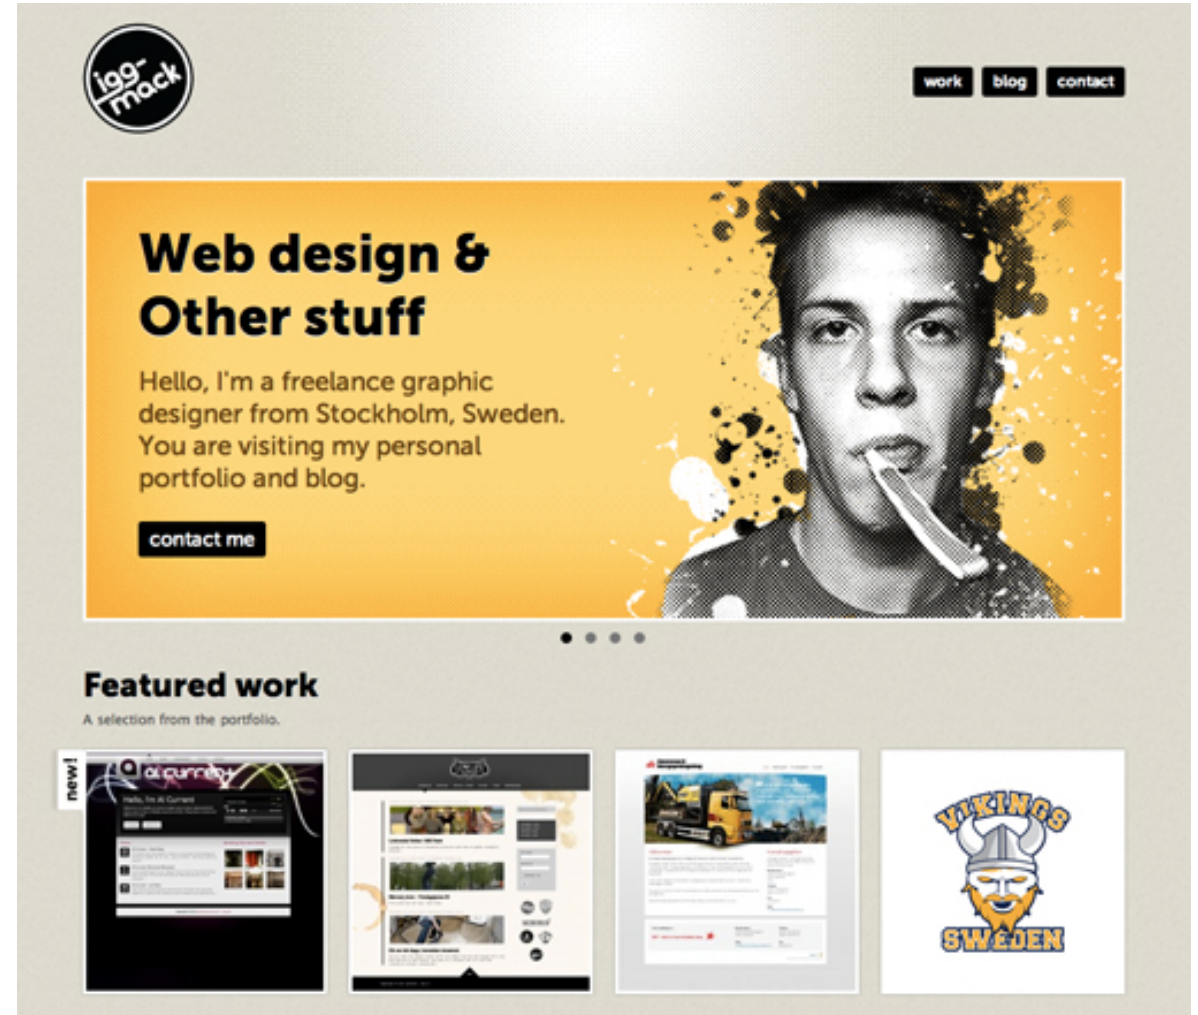

Featured Graphic

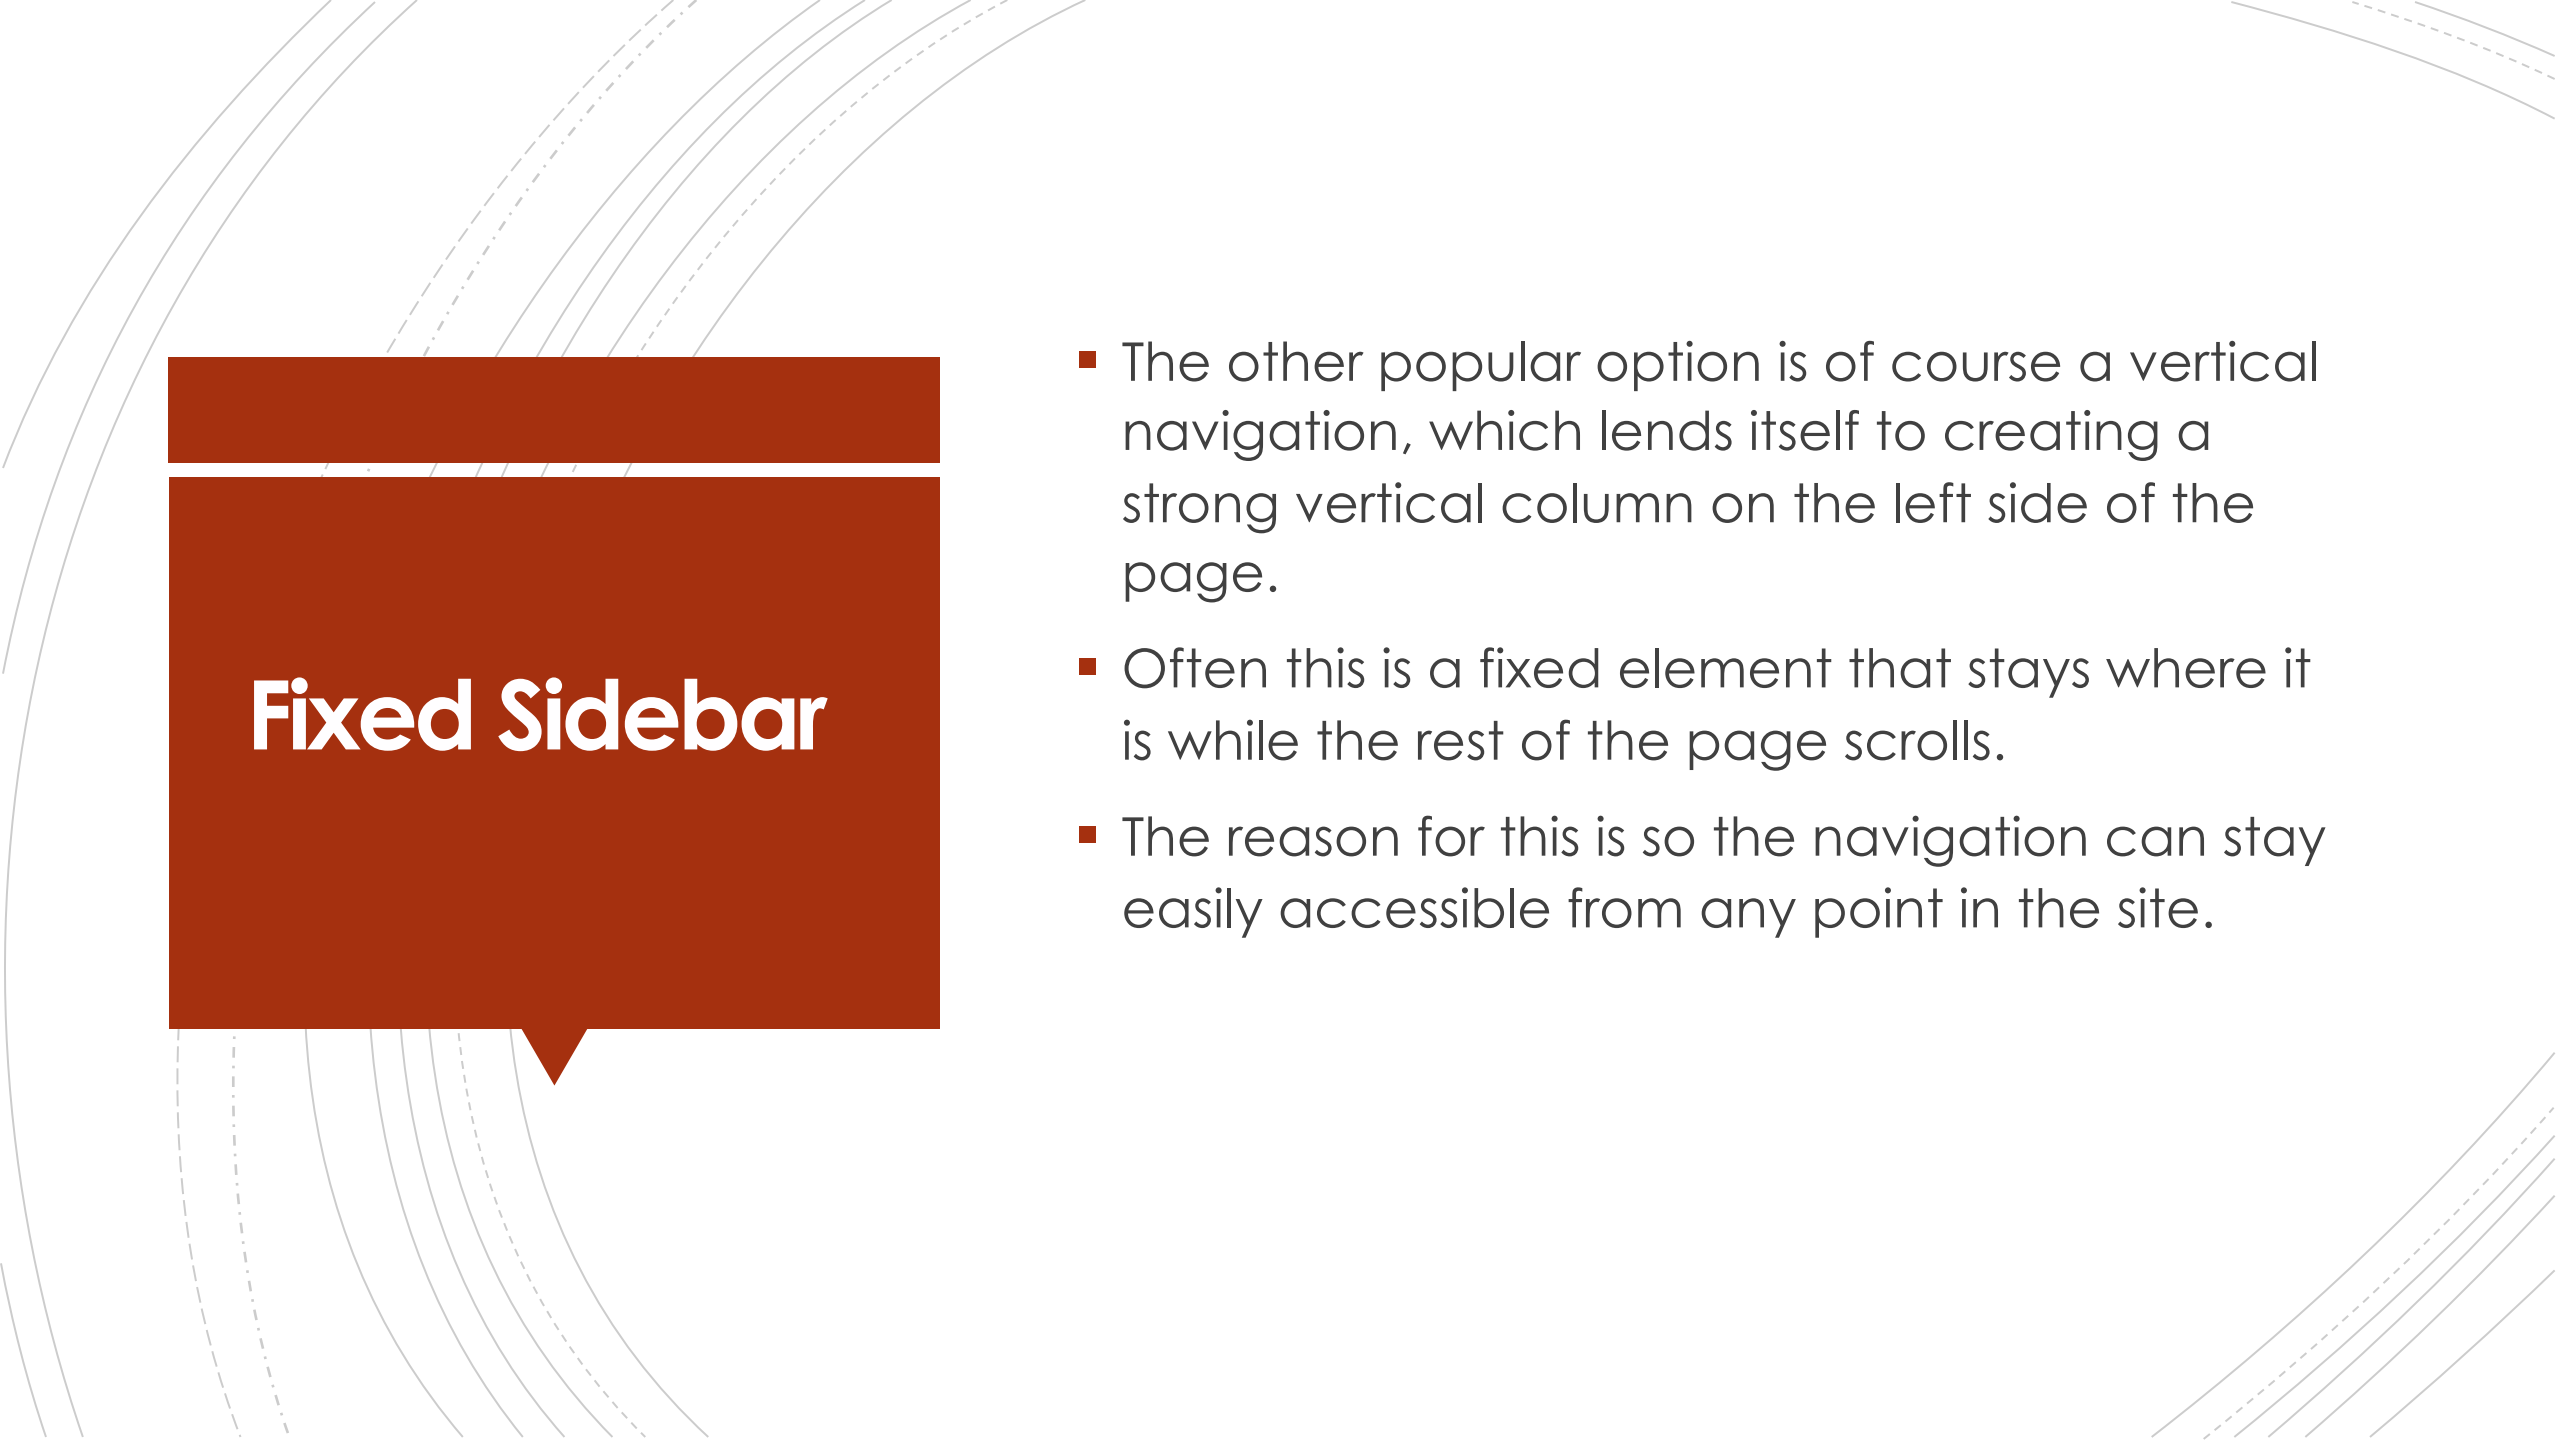

Five Boxes

- The five boxes layout is simply an evolution of the three boxes layout.
- All of the same logic applies, it's just been modified to hold even more content
- Obviously, as you add to the layout, the secondary items become smaller and smaller so for most uses, five boxes is probably going to approach the limit.
- Ideas for switching it up include adding a large background graphic, rounding the corners, adding shadows and/or reflections, or perhaps even adding an interactive element to the smaller thumbnails.

Five Boxes

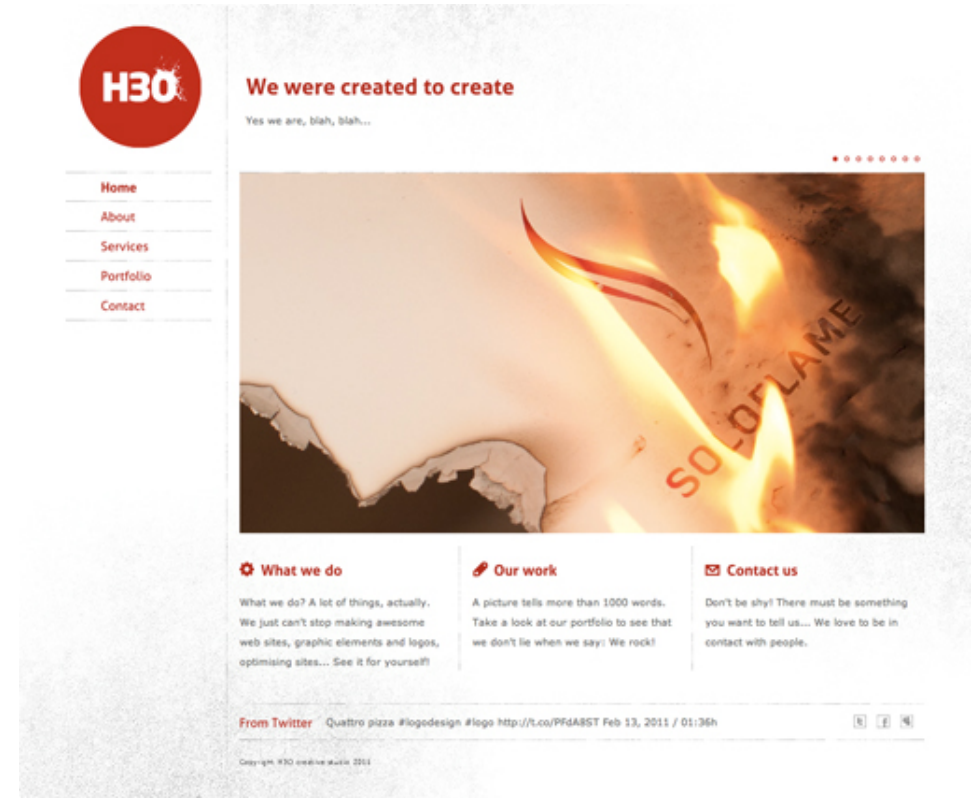

The background of the slide features several thin, curved lines in a light gray color, some solid and some dashed, creating a modern, abstract design. On the left side, there is a dark red rectangular area with a white text box inside it.

Fixed Sidebar

- The other popular option is of course a vertical navigation, which lends itself to creating a strong vertical column on the left side of the page.
- Often this is a fixed element that stays where it is while the rest of the page scrolls.
- The reason for this is so the navigation can stay easily accessible from any point in the site.

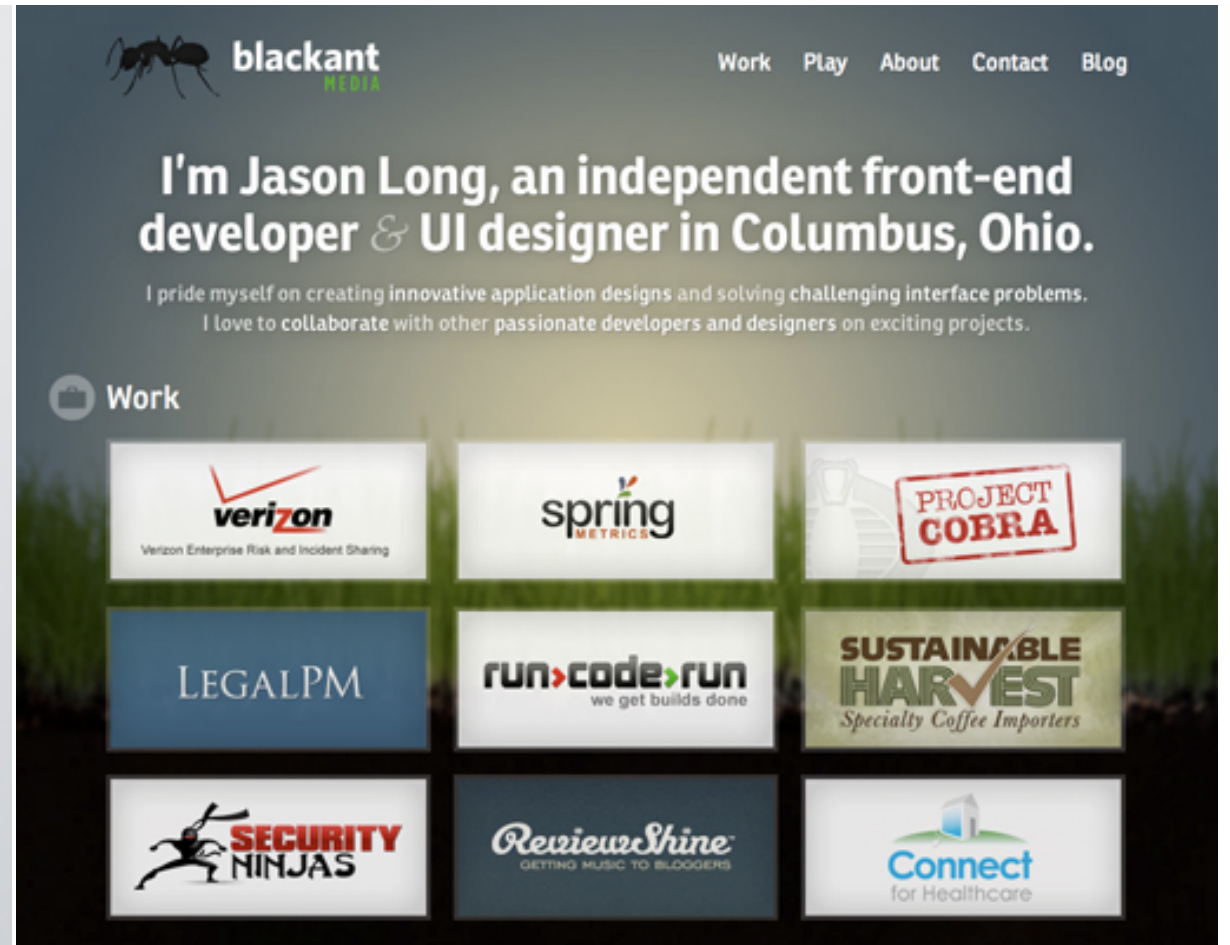

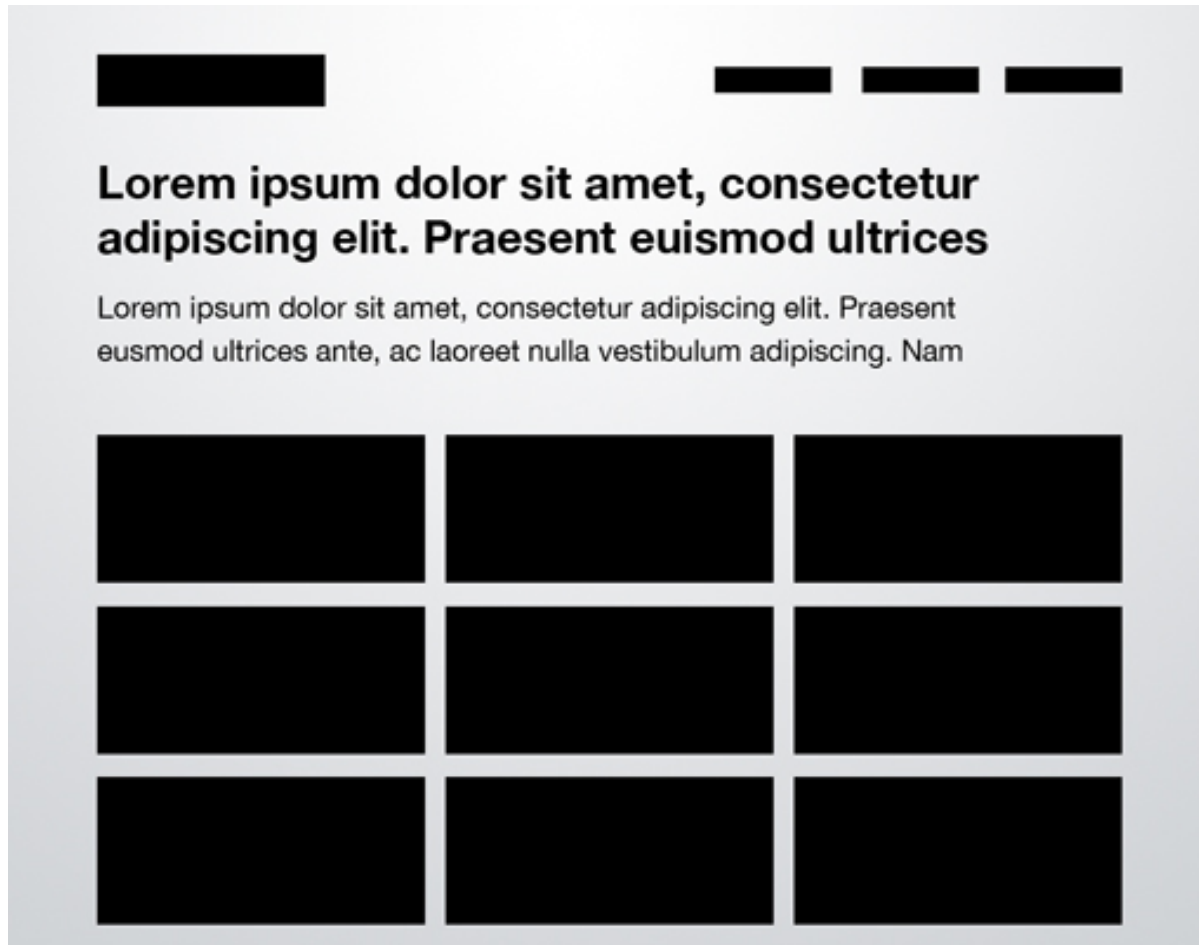

Fixed Sidebar

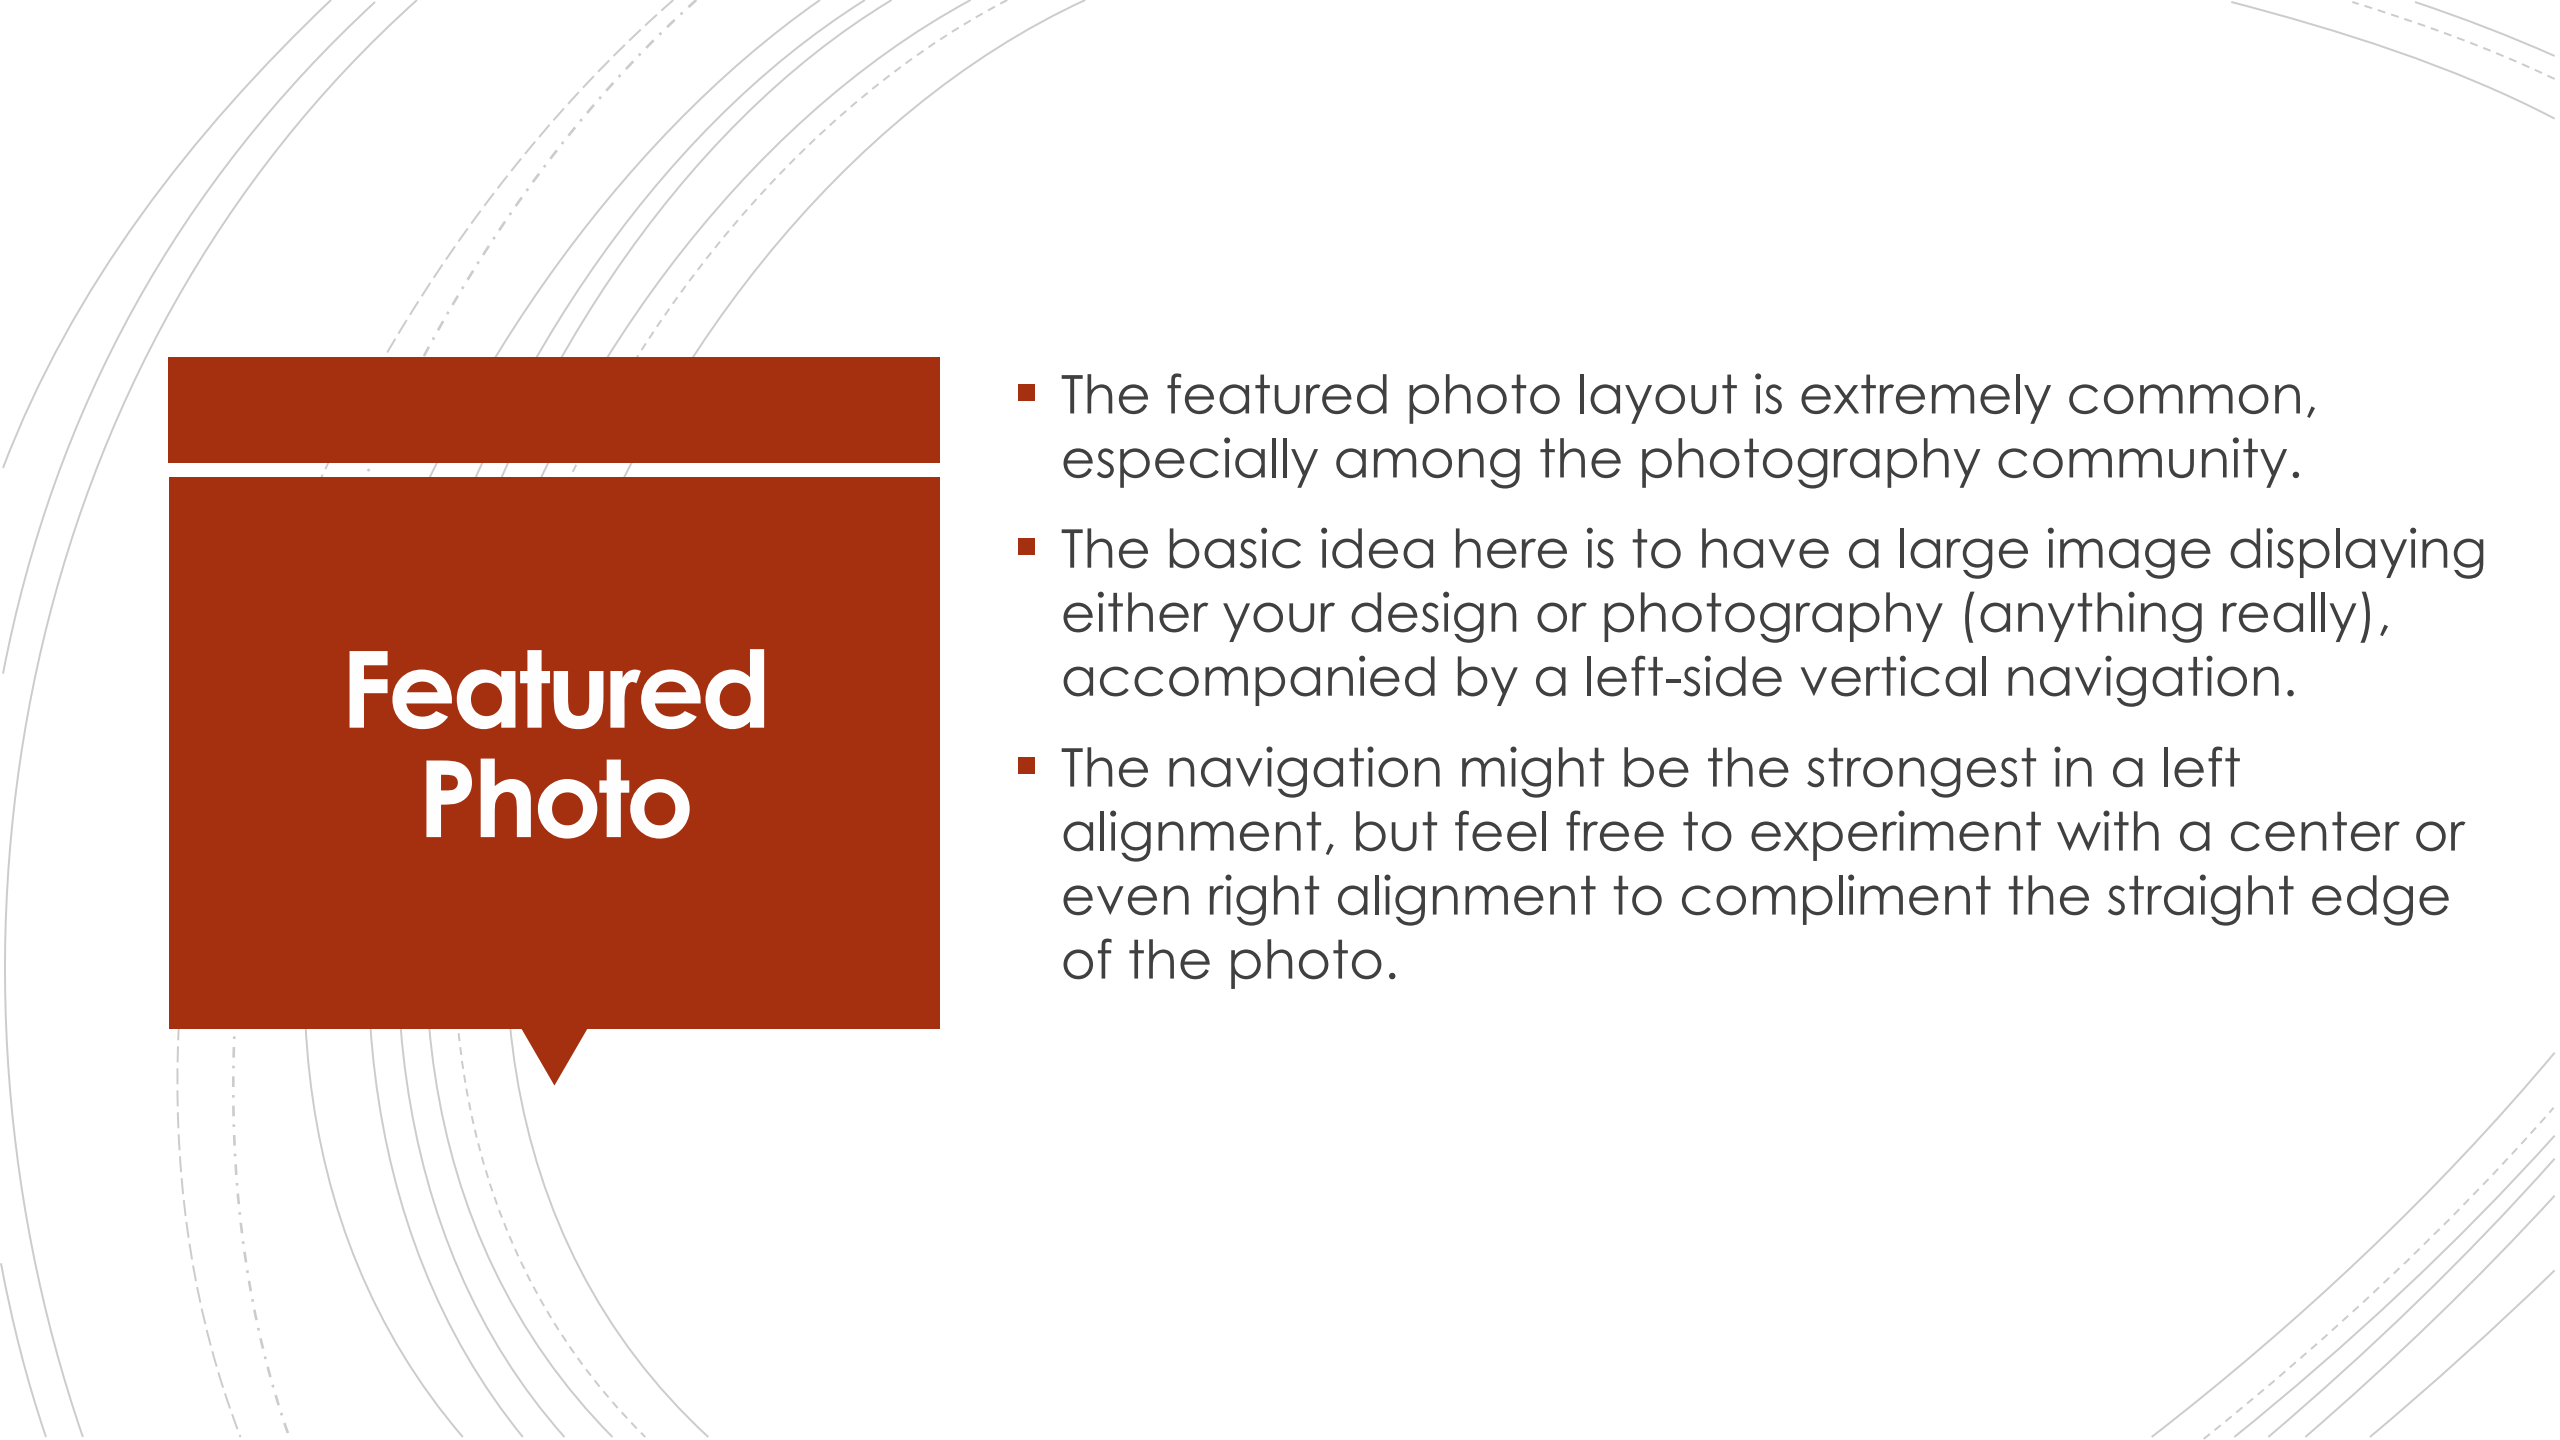

Headline & Gallery

- Everyone loves a good gallery page.
- From a layout perspective, what could be simpler?
- All you need is a solid, uniform grid of images and some room for a headline with an optional sub-head.
- The key here is to make your headline big and bold. Feel free to use this as a point of creativity and include a script or some crazy typeface.

Headline & Gallery

The background of the slide features a series of thin, curved lines in a light gray color, some solid and some dashed, creating a sense of motion and depth. On the left side, there is a dark red rectangular area with a white text box inside it.

Featured Photo

- The featured photo layout is extremely common, especially among the photography community.
- The basic idea here is to have a large image displaying either your design or photography (anything really), accompanied by a left-side vertical navigation.
- The navigation might be the strongest in a left alignment, but feel free to experiment with a center or even right alignment to compliment the straight edge of the photo.

Power Grid

- The power grid is one of the most complex layout, but it is one of the most effective layouts for pages that need to contain all kinds of various related content.
- From images and music players to text and videos, you can cram just about anything into this layout and it stays strong.

Power Grid

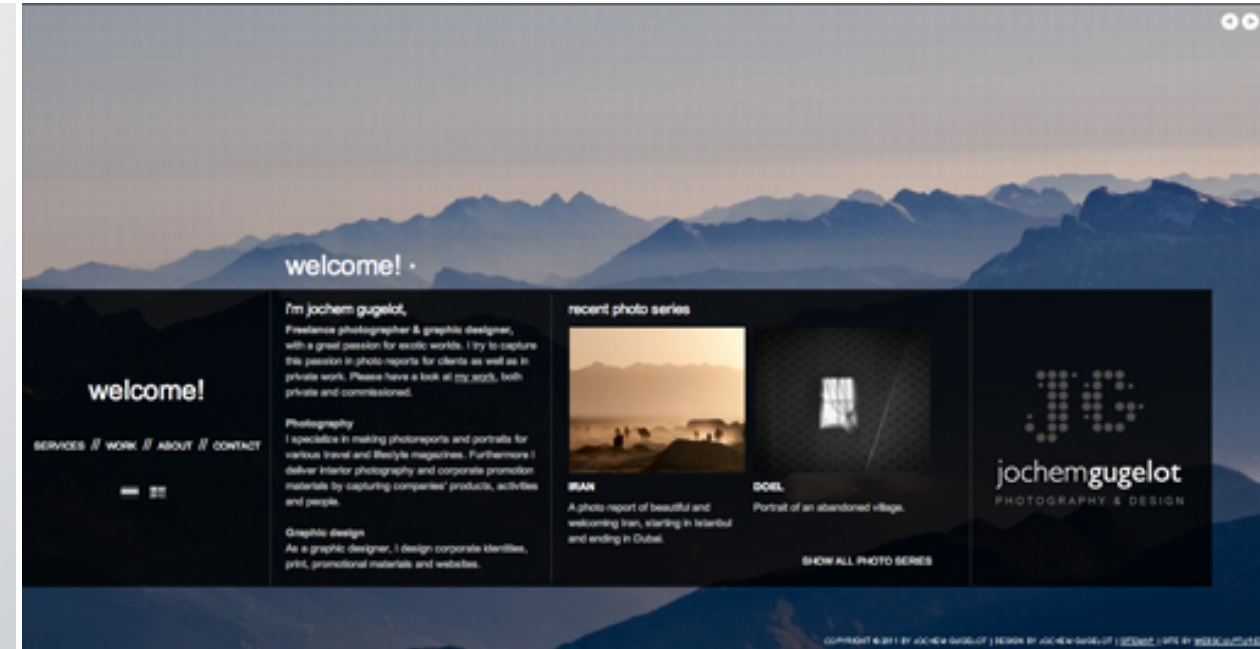

The background of the slide features a series of thin, curved lines in shades of gray, creating a sense of motion and depth. These lines are more prominent on the left side and fade towards the right.

Full Screen Photo

- The full screen photo layout is ideally suited for photographers, but will work on any site with a big, attractive background graphic to display and a limited amount of content.
- It can be really hard to read content when it is laid over a background image, so the basic idea here is to create an opaque (or nearly opaque) horizontal bar that sits on top of the image and serves as a container for links, copy, logos and other content.

Full Screen Photo

The background features a series of concentric circles in light gray, some solid and some dashed, creating a ripple effect. A large, dark red speech bubble is centered on the page, pointing downwards. The text 'Optimising your images' is written in white, bold, sans-serif font inside the speech bubble.

Optimising your images

How to Optimize Images for Better Search Engine Rankings

- You may not realize this, but images can generate a TON of traffic from image-based search engines (Google Images for example).
- If you want more of this traffic, you must learn how to optimize your images to score some of this traffic.
- Luckily, it's easier than you think... once you know what to do.

<http://diythemes.com/thesis/wordpress-seo-image-optimization/>

Image Optimization Best-Practice #1: Alt Text

- When you see a picture of a baby crying, you instantly recognize what's going on in the picture.
- The problem is, this instant recognition isn't possible for search engine spiders at this time. Instead, you must help the spiders understand each of your images with alt text.
- What is image alt text?
- The short answer is, it's the text that the search engine uses to understand images.

<http://diythemes.com/thesis/wordpress-seo-image-optimization/>

Image Optimization Best-Practice #1: Alt Text

To include it, you simply add alt="this is your alt text" to your image tag. Here's an example:

```

```

It's that simple.

<http://diythemes.com/thesis/wordpress-seo-image-optimization/>

Image Optimization Best-Practice #2: File Size

- You know page load times matter for SEO, right now, right?
- Right.
- So, to ensure that your images don't torpedo your fast load times, make the image file size as small as possible (without sacrificing quality, of course).
- With free tools like Picnik and Image Optimizer at your disposal, there's no excuse.

<http://diythemes.com/thesis/wordpress-seo-image-optimization/>

Image Optimization Best-Practice #2: File Size

- Oh, and one more thing...
- DO NOT let your browser resize a large image to look smaller.
- When you have a large image, and input height and width tags on that image to make the image smaller, people load the large image first, and then the browser resizes it.
- To solve it, always use an image editing program to make your image a desired size, and upload that.

<http://diythemes.com/thesis/wordpress-seo-image-optimization/>

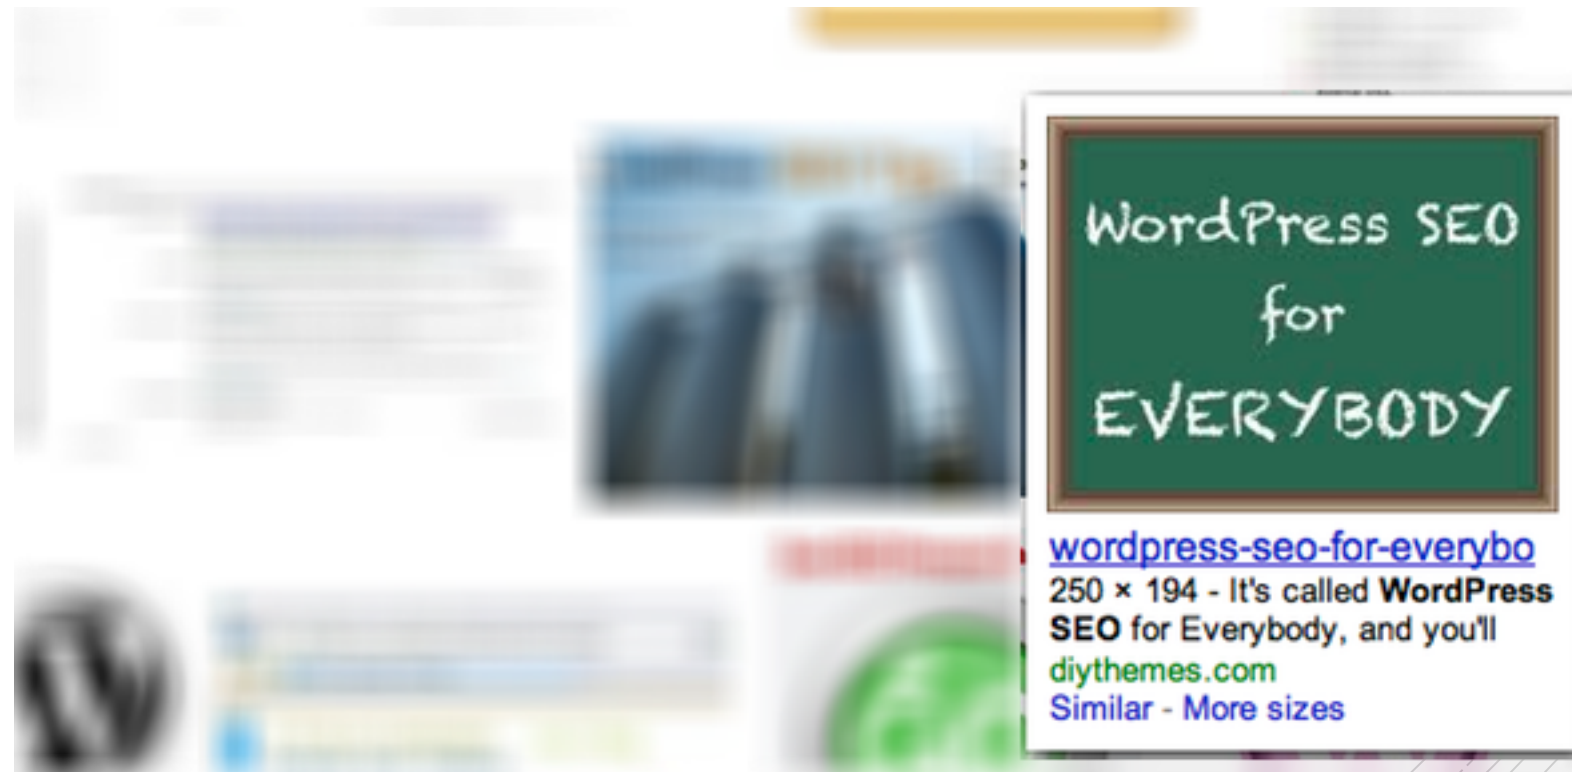

Image Optimization Best-Practice #3: File Name

- Before you upload your image, pick a descriptive filename—preferably a file name you want that image to rank for—because it will help with your search engine rankings.
- For example, if you want to see this in action, just do a sample search and view the images that rank. They almost always have the keyword you searched for in their file name.

<http://diythemes.com/thesis/wordpress-seo-image-optimization/>

Image Optimization Best-Practice #3: File Name

Or, see the image below... here with WordPress SEO.

<http://diythemes.com/thesis/wordpress-seo-image-optimization/>

Image Optimization Best-Practice #4: Captions

- As of right now, there's no direct relation between image captions and search engine rankings (that I know of).
- However, bounce rates are taken into account.
- What do I mean by bounce rate?
- If someone searches for a term, clicks on your page, and bounces back to the search page quickly, search engines use that as a factor for rankings.

<http://diythemes.com/thesis/wordpress-seo-image-optimization/>

Image Optimization Best-Practice #4: Captions

- It makes sense too... Why would someone go back to the search results?
- Because the content they clicked on didn't satisfy what they were looking for.
- And that's where image captions come in.
- Next to your headline, image captions are important because they are one of the most well-read pieces of content on your entire site.
- So, if you fail to use them, you're losing out on one more chance to lower your bounce rate.

<http://diythemes.com/thesis/wordpress-seo-image-optimization/>

The Bottom Line

- If you spend hours crafting the perfect post, don't miss out on the chance to optimize your images for maximum search engine benefit.
- All of these steps should take you no longer than a few minutes, and sometimes, it really can be the "icing on the cake."
