

QUESTION 1 **(34 MARKS)**

LetsParty

LetsParty is a catering company that specializes in doing home parties for clients. The events co-ordinator explains the processes for a party as follows:

“Clients contact the company to request a booking for their party. The events co-ordinator discusses the party with the client. The client specifies the type of party. Then a discussion follows where eventually the client selects the menu items that needs to be served. The events-co-ordinator calculates the final price and the client pays a 10% deposit.

Two weeks before the party date, the chef looks at the menu and orders the ingredients for the menu items. Depending on the menu items, the chef starts preparing the menu items.”

She also explains that these processes must form part of the new proposed system. Every week she prints a report that will allow her to control and organize the upcoming parties.

REQUIRED

- 1.1 Give the definition for each of the following? (5)
 - stakeholder
 - external event
 - external actor
 - temporal event
 - state event
 -
- 1.2 Who are the stakeholders? (3)
- 1.3 Write one user story for every stakeholder. (6)
- 1.4 Complete a use case diagram for the new proposed system, based on the above scenario. (11)

- 1.5 You interviewed the manager of the company as well as the events co-ordinator (3)
and received conflicting answers with regards to how some of the processes work.

Why do you think this happened?

How would you resolve this to get to the correct answer?

Can you, as the systems analyst, make a decision on what is the correct process description? Why or why not?

- 1.6 Describe the open-item list and why it is important. (3)

- 1.7 You have been assigned to resolve several issues on the open-items list, and you (3)
are having a hard time getting policy decisions from the user contact. How can
you encourage the user to finalize these policies?

QUESTION 2 (10 MARKS)

LetsParty is a small catering company that caters for small functions. You were asked to assist with developing the menu subsystem for the new information system that is planned.

The chef explains the information requirements for the system as follows:

“Every function has a menu that is confirmed two weeks before the function date. Specific menu items (the food that is going to be served) are selected from a list of available menu items. There are different types of menu items, namely entrée, main and sweet. I buy the ingredients for every function based on the menu items on the menu. Menu items are organised around the type of function. Every function has a unique list of items that can be served at the function. Drinks do not form part of the subsystem.”

REQUIRED

Draw a domain model class diagram for the above scenario. Include attributes for every class.

QUESTION 3 **(12 MARKS)**

LetsParty is a small catering company that caters for small functions. You were asked to assist with developing the **booking** subsystem for the new information system that is planned.

The owner of LetsParty explains the process as follows:

“A potential or existing client uses the company website to select a date. The system will check availability. If the date is available, the client then select the type of function required from a list. If the date is not available, the client has the option to select another date or leave the system.”

REQUIRED

Draw an activity diagram the **select function date** scenario.
