

## Design Principles Exercise

### Question 1:

Consider the following code snippet:

```
public boolean isValidCustomer(Customer customer) {
    String isValidCustomerPrimaryEmail
        =customer.getEmail().getPrimaryEmailAddress();
    long isValidCustomerContact = customer.getContactNumber().getMobile();
    // some good conditions here
    if (isValidCustomerPrimaryEmail != null && isValidCustomerContact != 0) {
        return true;
    }
    return false;
}
```

- a. What design principle is violated in the code snippet above. Give details.
- b. Now that you have identified the design principle violated, rewrite the code above to fix the violation.

### Question 2:

Consider the following code snippet:

```
public interface Conversion
{
    public void intToDouble();
    public void intToChar();
    public void charToString();
}
```

- a. What design principle is violated in the code snippet above. Give details.
- b. Now that you have identified the design principle violated, rewrite the code above to fix the violation.

### Question 3:

In computer programming, what do the DRY and KISS acronyms refer to? Elaborate on your answer.
