INTRODUCTION

Throughout the year, my group plans to develop a private doctor application for android devices. We will attempt to create this application to the best of our ability with the knowledge that we have learnt and are still learning at university. This is a new and exciting assignment for most of the group members, hopefully one day the knowledge and experience that we acquire through this task will help everyone in the working industry.

PROBLEM DEFINITION

The reason behind our group choosing to create this application was more inclined to meeting the needs of people that are sick or injured and seeking medical help or advice. This app caters for the young and the older generation as the app will be easy to use as well as save them time from waiting in long lines at the doctor's office. Our application will allow patients to book ahead of time, it will also allow the doctor to access the patient's digital file on the database to know what ailments they will have to treat beforehand. Most interactions that take place between the doctor and patient will be recorded on the application for both to view, this includes assigned medication, payment, chronic diseases, injuries, etc.

COMMUNICATION (methods and planned strategies for effective communication)

Communication methods:

1. Discord

This is where we will be holding our virtual meetings whenever the need arises or for report backs. With the use of video, virtual meetings allow for more interactive interactions and personal connections. On this platform we share our screen as well as send diagrams for team members to see.

2. WhatsApp group

WhatsApp is our daily form of communication as we can instantly get messages through to each other. This is very easy to use and necessary when you want to send through a message instantly. It will improve collaboration and make sure that all group members are on the same page. We can also hold quick meetings via the WhatsApp call option. We schedule meetings via WhatsApp and these meeting minutes are recorded by the scribe of the group. To prepare group members for meetings an agenda is shared with everyone so that we are

all aware what the purpose of the meeting is and what we want achieved by the end of the meeting.

3. Student Emails

Understanding that email is one of the most important professional ways of communication and sometimes you will need a written record of the communication. It is convenient and effective. We have then decided that when sharing documents or our work amongst each other, we use emails. We must get used to the idea of writing emails as young upcoming professionals.

Strategies for effective communication:

To have successful team communication, everyone must believe that they can communicate freely and openly with one another. Rather than just saying what they are doing. It is better if everyone shares details and challenges, they are facing with their tasks. This will start a conversation in which others will give recommendations or learn from one another as a group.

1. Team meetings.

- It is very important getting together as a whole team. This is the most effective way for everyone to find out about what each other is working on and how far they have progressed. This can be done through any communication method.

2. Productive meetings.

- There must be a detailed agenda created and be communicated to every member beforehand. This will ensure everyone prepares for the meeting and it will save time as there will be points of discussion already. Also, make a clear indication when and where the meeting will take place. The group leader will say when and the scribe will type the details.

3. Progress Updates.

- We will look at a list of established tasks and deadlines and determine who requires daily progress reports. As we move forward, we will choose the best ways to connect and make sure that everyone gets regular progress updates.

4. Be timely:

- When receiving information don't wait until last minute to deliver it. When the leader gets a message, he needs to convey it immediately to the group members and make sure they all respond and understand.

5. Listening:

- Everyone needs to give their input and every group member needs to listen. This will make sure you have many ideas because everyone thinks differently. This gives maximum options of coming up with good ideas.

6. Be consistent:

- Do not slack on your work if you've done well previously. Everyone is expected to work equally on an assignment. Everyone in the group should give 110% as we all want a high mark for our assignments.

7. Encourage feedback:

- It's important for group members to feel comfortable sharing questions and concerns. When you encourage feedback and listen to what your group members have to say, you send the message that their opinion matters.

TASK ALLOCATION

Waseem Dollie is the group leader. His responsibilities are making sure the group member's work is done. He also informs them of any new work that's provided by the lecturer or supervisor. Since he created an app last year in Project 2, he can share his knowledge and help group members understand the work. He is also the one to list each group member's responsibilities and make sure that they fulfill it. The tasks that were assigned to him are coding and designing the splash screen and making sure the database works when storing information about patients. He is also the one person in the group that has the most knowledge regarding mobile application development.

Zaeem Petersen is the co-leader. His responsibilities are making sure each group member does the right work and are not overlapping with each other. He also reviews all the other group member's code and tells them what else needs to be added. The tasks that were assigned to him are coding and designing the register and login page. This is extremely important as this is the first step in the app process.

Ilyaas Davids is the prioritizer. His responsibilities are making sure that the group focuses on the most important issues and does not get caught up in the details. He also seeks to explore new areas of inquiry, alternative perspectives and ideas. The tasks that were assigned to him are coding and designing the bookings page as well as appointment history and appointments due.

Daniella Burgess is the Scribe/timekeeper. Her responsibilities are taking notes during meetings to keep a record of what has been decided, tasks that have been assigned, and meetings that are scheduled. She also summarizes discussions and decisions for the rest of the group and distributes a summary of each meeting to all group members. The tasks that are assigned to her are coding and designing the payment system which displays the amount due.

Siphosethu Feni is the collaborator. Her responsibilities are making sure she follows instructions well and make sure she gives regular feedback on her work. She also encourages the group to think through their approach and ideas. The tasks that were

assigned to her are coding and designing the contact page. Patients use this page if they have any queries.

Thabiso Matsaba is a collaborator. His responsibilities are making sure his work is correct and that he included everything he was supposed to include. He also needs to liaise with the rest of the group members about his work and if there's more to be added. The tasks that were assigned to him are coding menu pages and navigation bars as well as work on the database.

GROUP ORGANIZATION (about leadership, scribe and any other important roles in the group)

The leadership of our group works to help set strategic goals for the organization while motivating individuals within the group to successfully carry out assignments in service to those goals. The group leader, co-leader and prioritizer of our group works efficiently as a collective to ensure that all tasks are successfully executed. This structure was created to ensure that each member's work gets checked by different individuals to ensure stellar work. The role of the group scribe was to record all decisions, actions and issues noted by the group during meetings, as well as recording significant discussion. The collaborators are executors of the tasks issued by the leaders of the group and should always make sure to complete their work beforehand on time.

SCOPE STATEMENT

For our Project 3 group assignment we will be doing a private doctor management system application. We will code and develop the application using Android Studio and use GitHub to collaborate and share code. The application will have three users: the Patient, Doctor and the Administrator. The patient will register then login on the system to book an appointment for an illness, check payments to be made and see a detailed list of previous appointments in the display. The doctor will be able to login and check

for appointments, booking times and illnesses the patient has. All this information will be stored in a database for the doctor to see.

CONCLUSION

This application we are about to create will help those patients that cannot afford to waste time either standing or sitting in a queue all the time. This app keeps track of their appointment history or upcoming appointment, so they'll never forget. Doctors are also able to see what sickness the patient has beforehand so they can be more prepared, and more patients can be seen per day. Since more people have smartphones and have access to the internet. We think that it is a suitable application to use for the present time. Thus, more people will get familiar with it and upgrades can be made from the feedback.

ADDENDUM

MEETING MINUTES

Agenda

Meeting for the 1st of March 2022

1. Each member to present an idea for our project
 2. Choose a project from the ones we presented
 3. Roles to be given to each member of the group
-

Meeting started @15:15 via WhatsApp call

Members of Group 10

1. Waseem Dollie
2. Daniella Burgess
3. Zaeem Petersen
4. Ilyas Davids
5. Siphosethu Feni

Members Present

1. Waseem Dollie
2. Daniella Burgess
3. Zaeem Petersen
4. Siphosethu Feni - disconnecting

Members Absent

1. Ilyas Davids – had something to do

Minutes

1. Discussed several types of projects such as:
 - Mobile programming
 - Websites*We decided on mobile programming as most members have done it before
2. Different Mobile App ideas
 - Restaurant App (Siphosethu)
 - App like SOS that allows students to choose subjects and make payments for chosen subject (Zaeem)
 - Car wash appointment app, pet manicures and wash appointment app (Daniella)
3. Android Studio will be used for the coding
4. Since everyone was not present another meeting was scheduled

Next meeting on Thursday the 3rd of March 2022

Meeting adjourned @15:31

Agenda

Meeting for the 3rd of March 2022 @15:15

1. Decide on the final project
2. Give group members their role

Meeting started @15:15 via WhatsApp call

Members of Group 10

1. Waseem Dollie
2. Daniella Burgess
3. Zaeem Petersen
4. Ilyaas Davids
5. Siphosethu Feni
6. Thabiso Matsaba

Members Present

1. Waseem Dollie
2. Daniella Burgess
3. Zaeem Petersen
4. Ilyaas Davids

Members Absent

1. Siphosethu Feni – doctor's appointment
2. Thabiso Matsaba – laptop speaker problems

Minutes

1. Sidenote – more ideas on the WhatsApp group
2. Android Studio
3. Roles
 - Group Leader – Waseem Dollie
 - Secretary/Scribe - Daniella Burgess
 - Co-Leader - Zaeem Petersen
 - Prioritizer– Ilyaas Davids
 - Collaborators - Siphosethu Feni & Thabiso
4. Discussing the flow of the program

-Splash Screen for 3 seconds

-Patient

 Patient registers then login

-Book an appointment

 Medical aid or not

 What illness you are booking for

 Then payment owed is displayed

-Doctor

 Login

 Patient booking, time, and illness

-Database

Stores:

Patient name - Surname, Address, Medical Aid or not, Amount owed/Balance

Next meeting on Thursday 10th of March 2022 @15:15

Meeting adjourned @15:38
