

WORK INTEGRATED LEARNING (WIL) PROGRAMME

NAME OF COMPANY/PROJECT:		Graduates Recruitment Portal				
WEEK	FROM	[11/10/2022]			TO	[14/10/2022]
TUES	On this day, I had a short informal meeting with my team on WhatsApp about working on the user-interface design. We discussed which tool to use to design the user interface and figure out how to tackle the inconsistency issue.					
	After the meeting, I opened Figma which is a UI Design and Prototyping tool and began designing the User Interface based on the Wireframes that we created last week.					
	I finished the amount of planned work I had to do in the afternoon.					
WED	On this day, I began today's work. Today I planned to add additional screens that were not present in our previous design plan.					
	I then checked other team members' designs and gave a few pointers on the design.					
	I then linked all the screens in Figma to make an interactive prototype for my part.					
THUR	On this day early in the morning, I attended our weekly meeting where we present our group work. Unfortunately, our group leader was not available this week so he asked me to run the meeting. At the meeting, each group member presented his/her work and we gave feedback.					
	Later in the evening, I began work on creating a consistent design using everyone's design ideas to create a consistent UI design which could be presented to the client on Friday.					
	Unfortunately, my power went off for six hours and only the graduate's UI design was complete.					
FRI	On this day, early in the morning, I made some touch-ups on yesterday's work since load shedding disrupted the work so that we have presentable work.					
	At 09 AM I joined the meeting and presented the design and we got some feedback from the client on what is missing and what could be improved.					

MENTOR EVALUATION	RATINGS (tick the relevant box)					STUDENT REFLECTION	
EMPLOYABILITY SKILLS	Requires Improvement	Inconsistent	Marginal	Competent	Excellent	EMPLOYABILITY SKILLS	
	1	2	3	4	5		
COMMUNICATION SKILLS						COMMUNICATION SKILLS	On Thursday during our weekly meeting, one of my colleagues did not have a clear understanding of the difference between a wireframe and user-interface design. I explained it to him using an example of a human skeleton & a fully flashed human.
							He understood and he was satisfied with the explanation saying that made a lot of sense. He now understood the difference between the two.
PROBLEM SOLVING SKILLS						PROBLEM SOLVING SKILLS	On Thursday morning in the meeting, we had a problem with the designs. There were too many of them and they were all different. We needed a consistent design which is the same because we are all designing for the same system otherwise, we will not have presentable work for the client which will be an embarrassment for the team.
							I then suggested we take one design which was neat and simple then add or redesign all the other pages taking ideas from the submitted

WORK INTEGRATED LEARNING (WIL) PROGRAMME

							design to form one consistent design. This turned out well. We had a consistent Graduate's User Interface of the System.
DECISION MAKING SKILLS						DECISION MAKING SKILLS	
TEAMWORK SKILLS						TEAMWORK SKILLS	On Tuesday in our informal meeting, one of my colleagues was struggling to decide which tool to use for designing. I advised her to learn and use Figma or Adobe XD as these two software are industry standard and having one under your resume can give you a good boost when looking for a job as a front-end engineer. I also shared some links for quick tutorials on the two software. My colleague took the advice and she figured out how to use Figma and produced her design using Figma. She earned a new technical skill.
TECHNICAL SKILLS						TECHNICAL SKILLS	No Technical Skills were acquired this week. I used the tool I always use for diagramming.
