

Transcript: 1 – 5 August (week 1)

Project and resource planning

Students generally submitting their CVs through the graduate recruitment email address. There is no particular format of the CVs by which it gets submitted. At the moment, **Bronwyn** saves the CVs in a folder and converting it to a “.pdf” format. When a **company** contacts her, she will look through all specific CVs, i.e., if it is for I.T students, she will forward those CVs to the company that requested for it, and they will take the process further themselves. CVs gets manually saved and she writes down all the student information such as name(s), surname, contact details, qualification(s) etc. Then she needs to go on an Excel spreadsheet and have all those information of the IT students and when they submitted, as well as residential area. Once the CV has been received and saved, she then acknowledges the CV to the students. The student gets notified via email whether the CV has been received and refer the student to read further on provided information by her i.e., *“Your CV will be kept on record for three months. You need to let me know when you CV got updated or whether you are still unemployed”*. That works normally along with an email address and a POPI act consent form that students generally get from Bronwyn and then return to her.

The aim of the **Graduate Recruitment Portal** is to focus on unemployment under recent graduates (in the last 2 years of graduating). The purpose of the Grad Recruitment Portal is to assist students with entry level positions. Most graduate don't notify if they found employment and end up submitting stale (old) CVs to the companies, which can be frustrating. After 2 years of graduation and the student did not find any employment yet, Bronwyn notifies them that will have to find a position on their own. The graduate recruitment focusses on the recent last 2 years and not pre-COVID, in other words, those that graduated recently (from 2020 up to now). If students graduated in 2019 for example and is currently busy with a new qualification or upskilling their existing qualification (like doing an advanced diploma), their CV's will still be considered and kept on the system. She is not involved in choosing who goes to company X or company Y.

She currently doesn't have an automated system that process those student CV's.

Email address used to email CV is gradrecruitment@cput.ac.za. Bronwyn is dealing with the entire recruitment all over CPUT, and not only on IT students. Input details she normally asks on the Excel spreadsheet is first **name, surname, qualification, drivers-license (yes or no), nationality, languages speak, own transport (yes or no)**. We are more than welcome to look at recruitment portal websites on what details they usually require from users and add it as suggestions. The only other company that might be involved when we do advertise positions would be MCD. If Bronwyn is unable to assist a company, or the CVs that she sent are not

exactly what the company is looking for, she gives them the option to advertise the position. Or sometimes a company would forward her positions/vacancy and ask her to post the position onto the recruitment portal. Companies don't want Bronwyn to submit CVs, they want students and graduates to apply directly to them. Currently, there is a graduate recruitment Facebook page where students and graduates can apply directly to those positions. Sometimes, she emails advertisements to MCD who manages the social student affairs.

Should a company request information for WIL (Work Integrated Learning) students, or a WIL coordinator request for graduate students, from a particular department or faculty, they will be in contact with Bronwyn directly about that request. But on a daily basis, it is just her.
