

Term 1 Mastery Guide: PFD473S

Project Management
Fundamentals,
Fayol & Mintzberg

Distilled visual frameworks
for the 10% Term 1 Assessment.

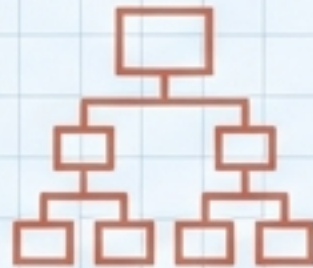

The Architect's Agenda

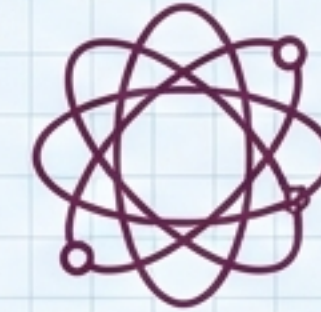

Part 1: The Project Environment (SO1)

Defining the endeavor, constraints, and organizational topologies.

Part 2: The Classical Architect (SO2)

Henri Fayol's top-down functional frameworks and 14 principles.

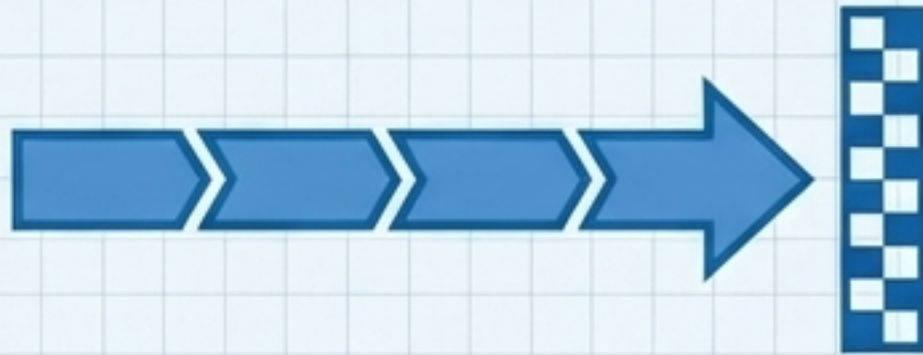

Part 3: The Behavioral Reality (SO2)

Henry Mintzberg's observational gestalt of what managers actually do.

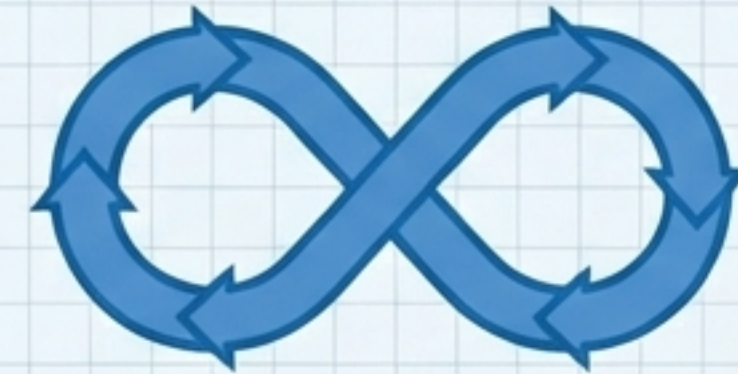

Defining the Endeavour

Project

Temporary & Unique.
Has a definite beginning and end.
Creates a unique product, service, or result.

Operations

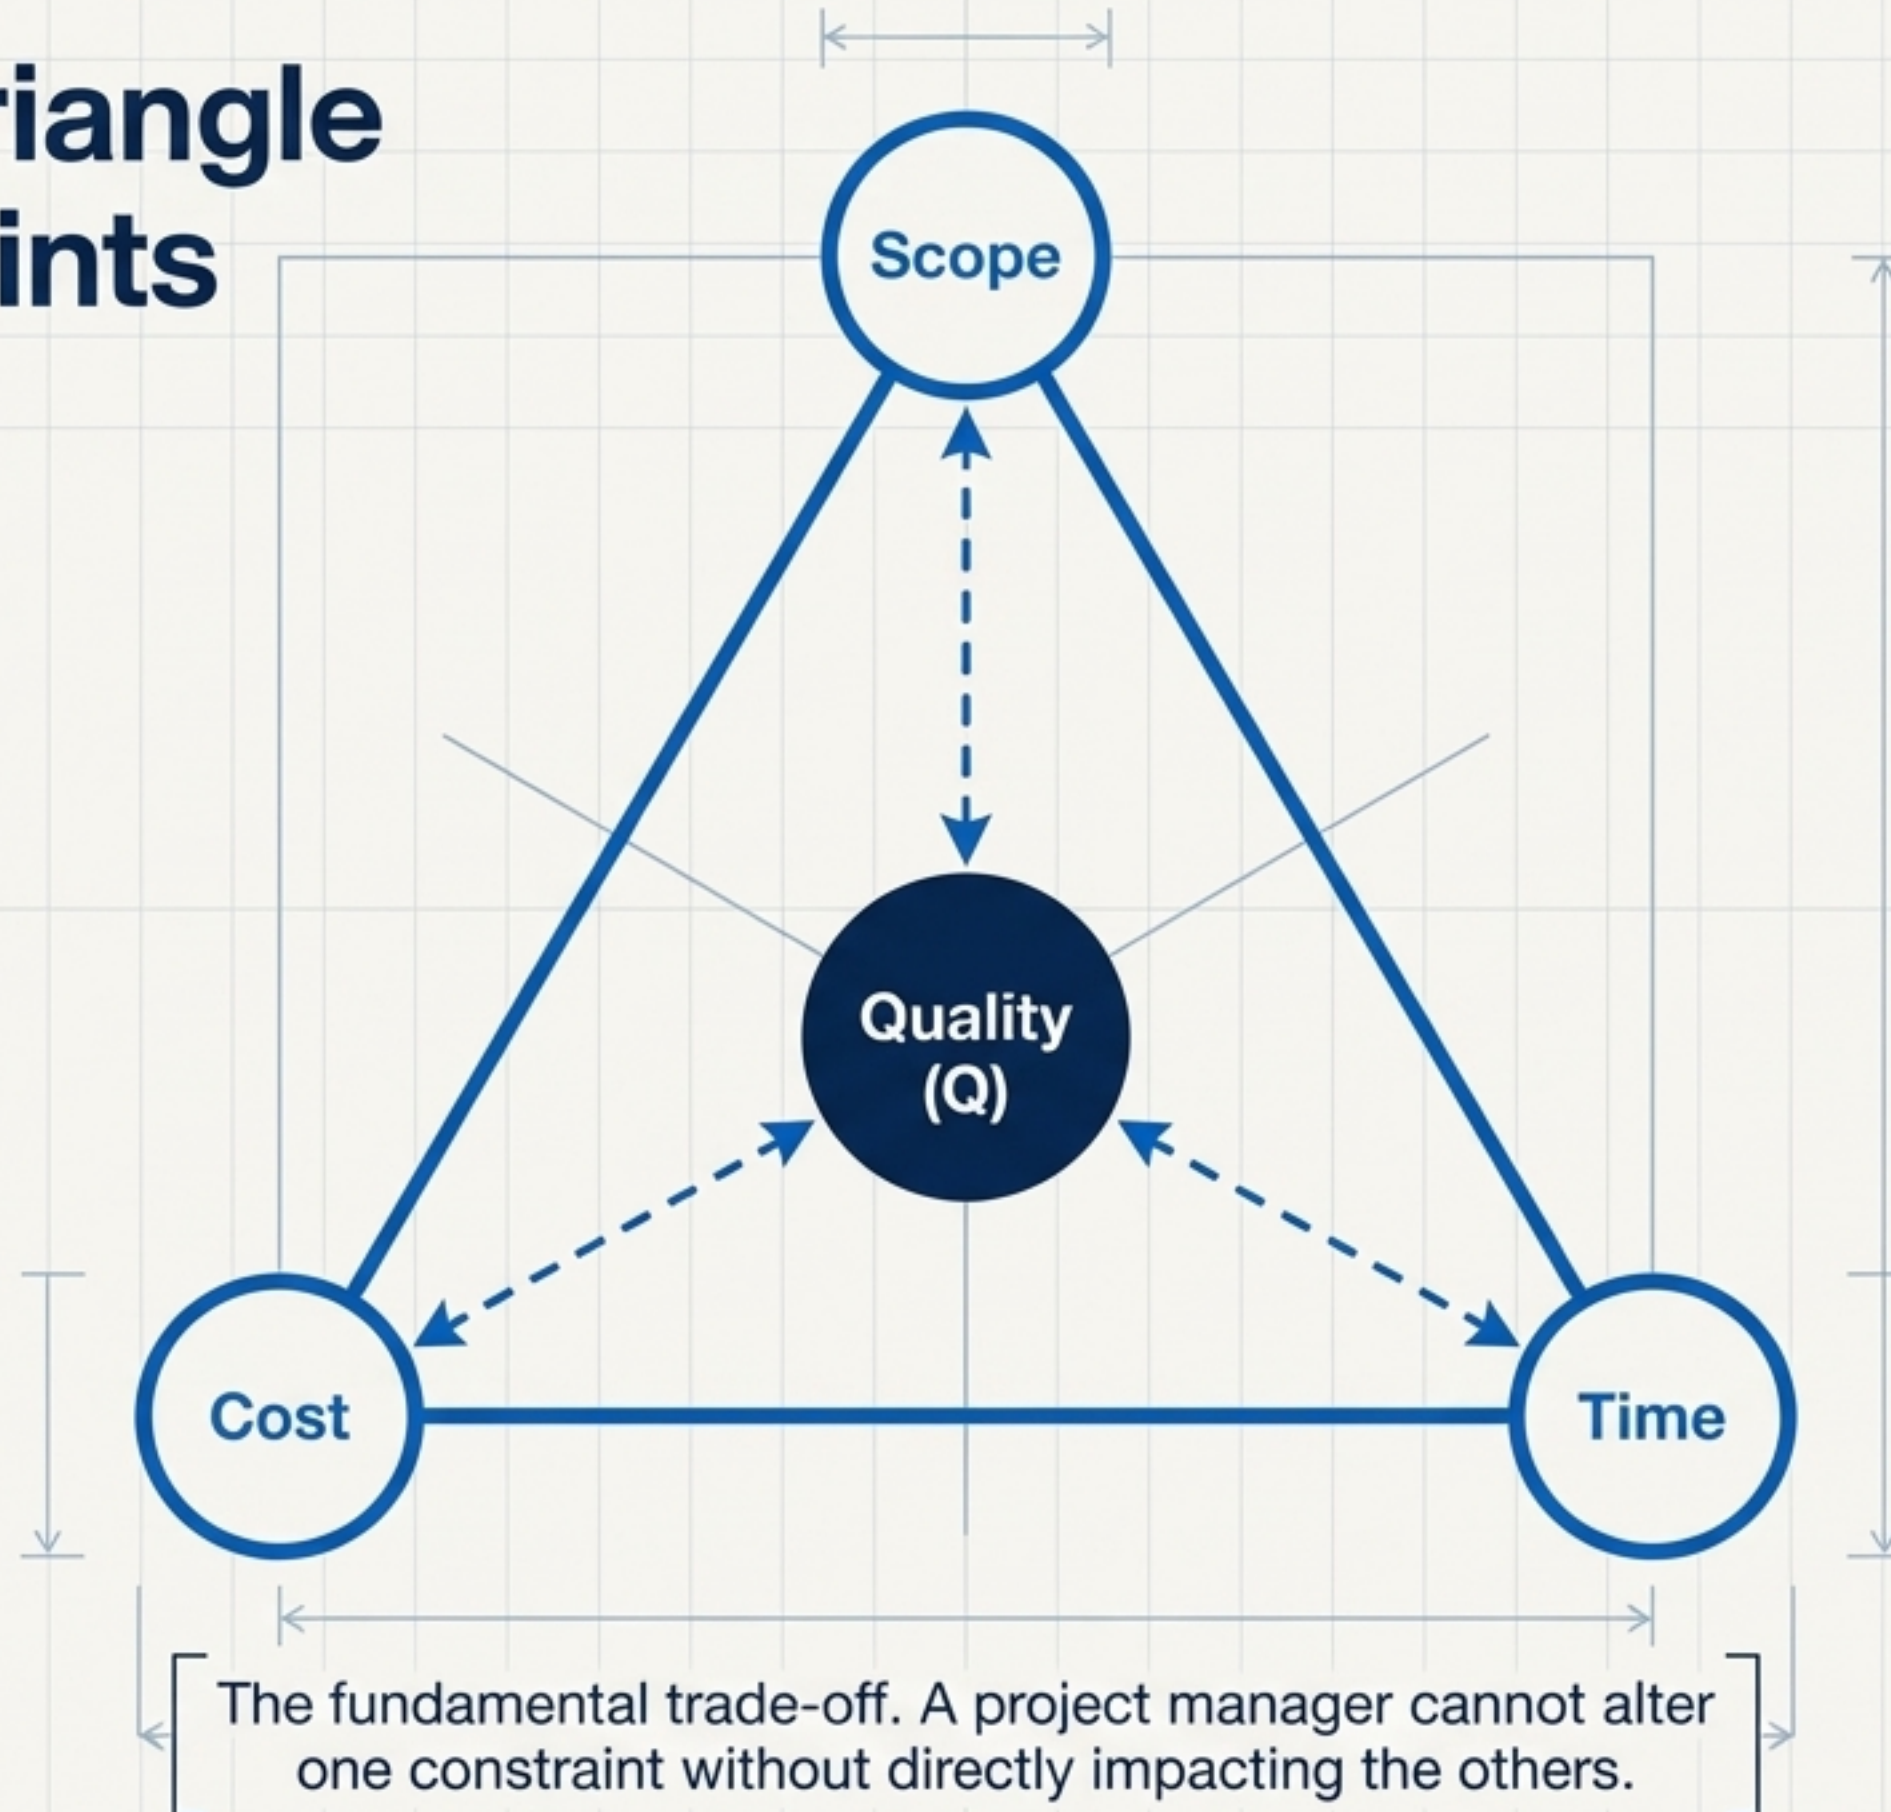

Ongoing & Repetitive.
Sustains the business.

EXAM TRAP: Progressive Elaboration vs. Scope Creep

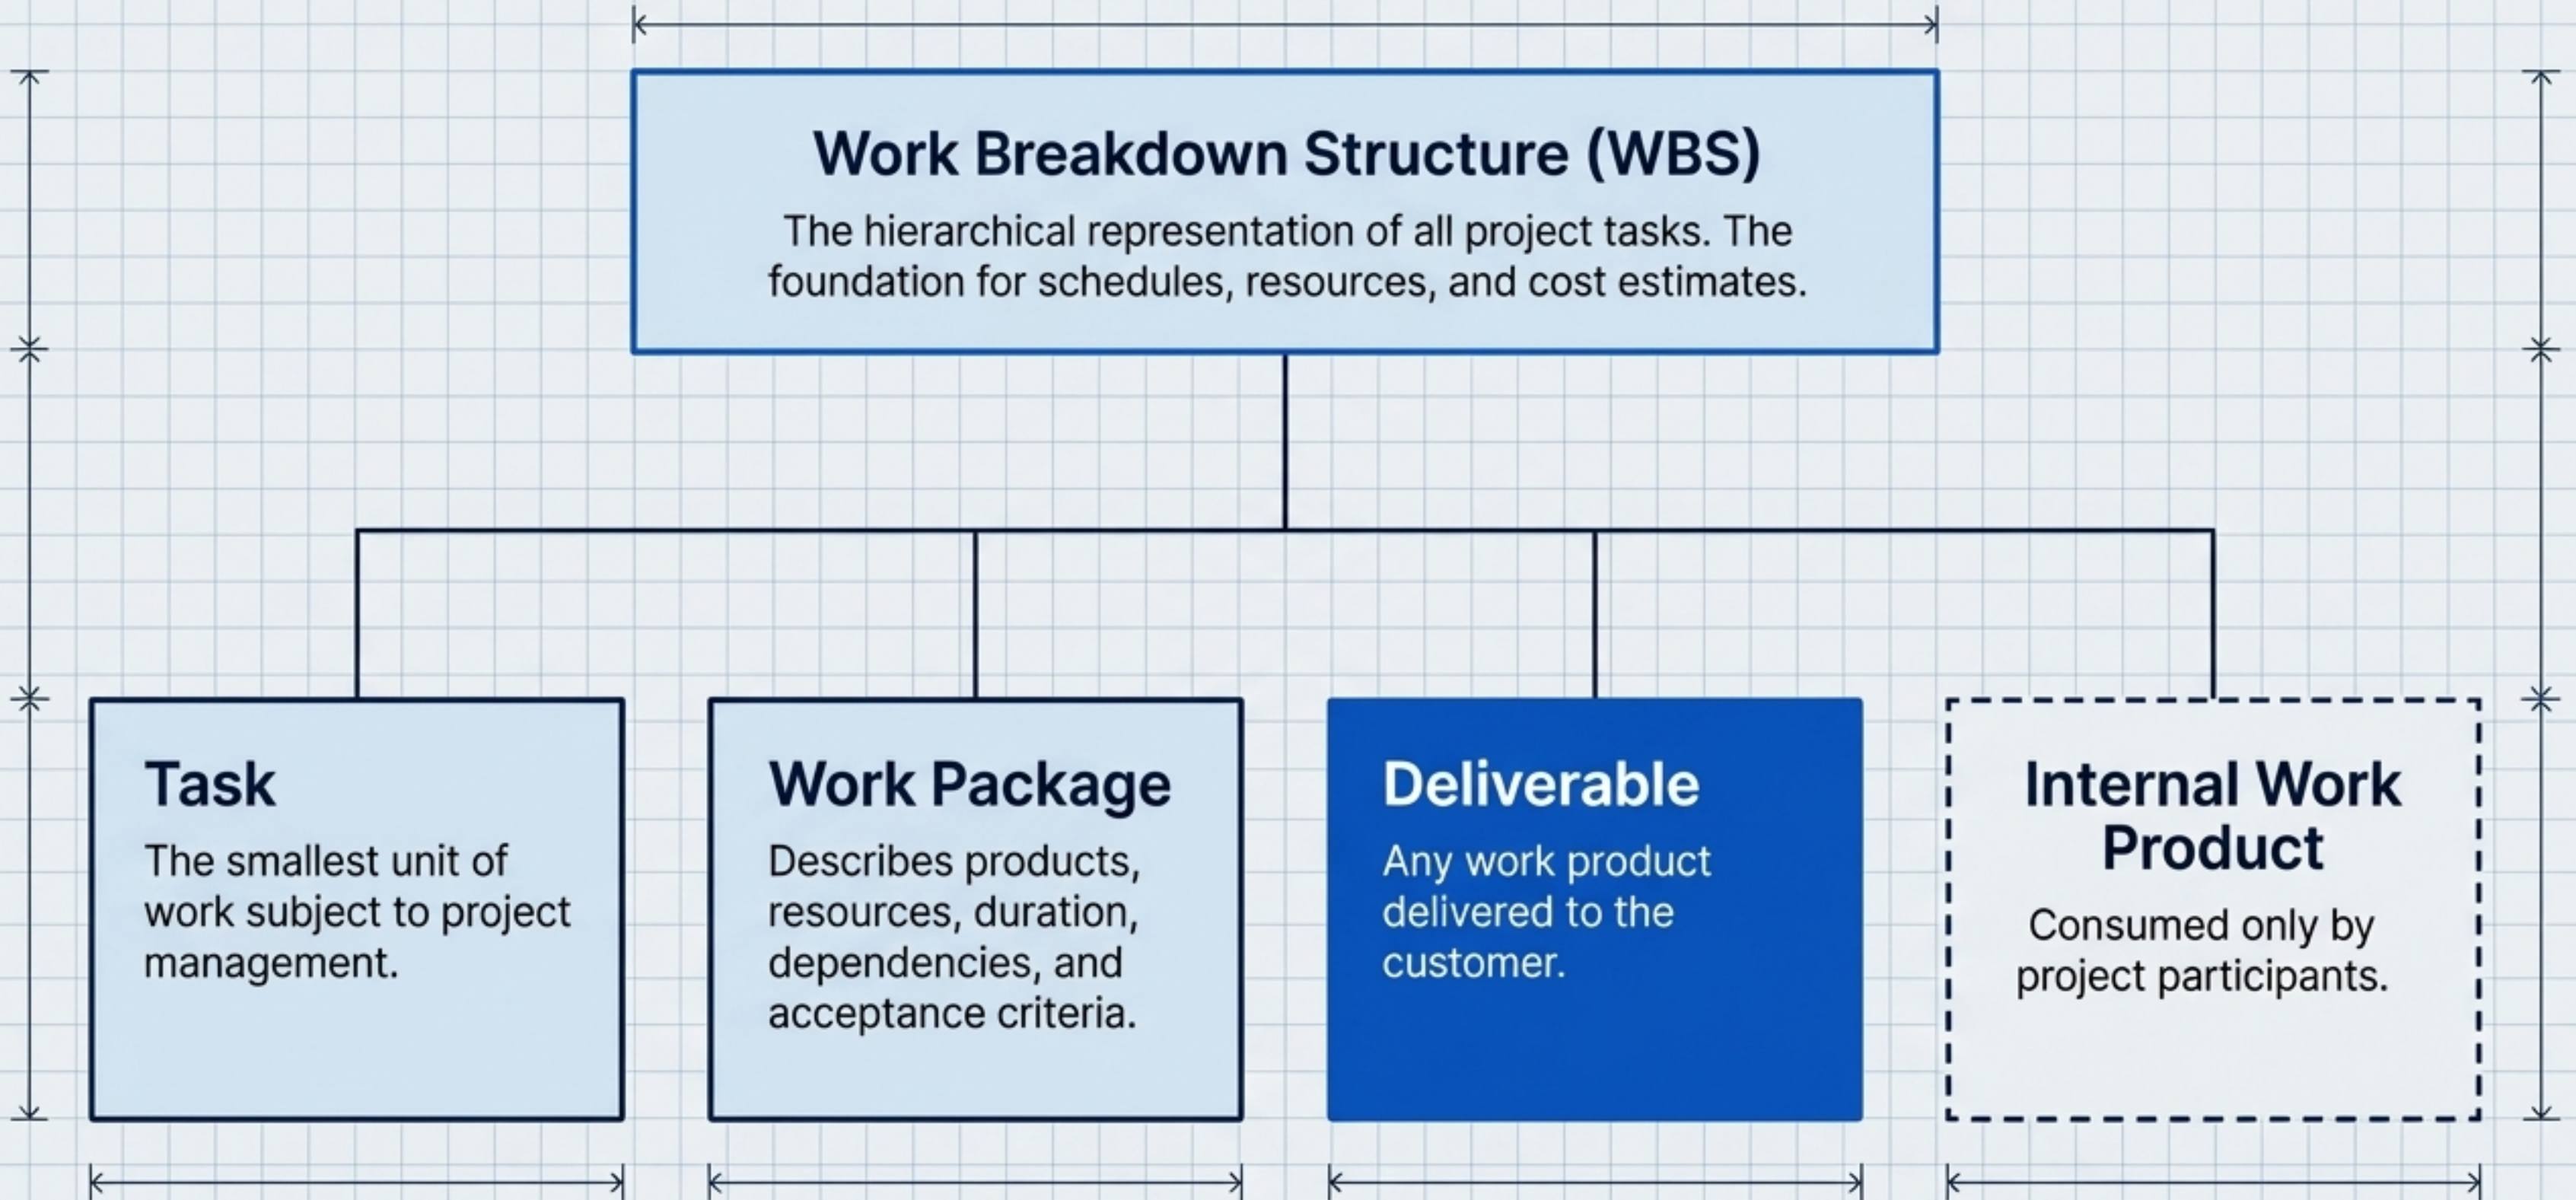

Progressive Elaboration: Developing in planned steps; scope becomes explicit over time. (CORRECT)

Scope Creep: Uncontrolled, unapproved additions. (INCORRECT)

The Iron Triangle of Constraints

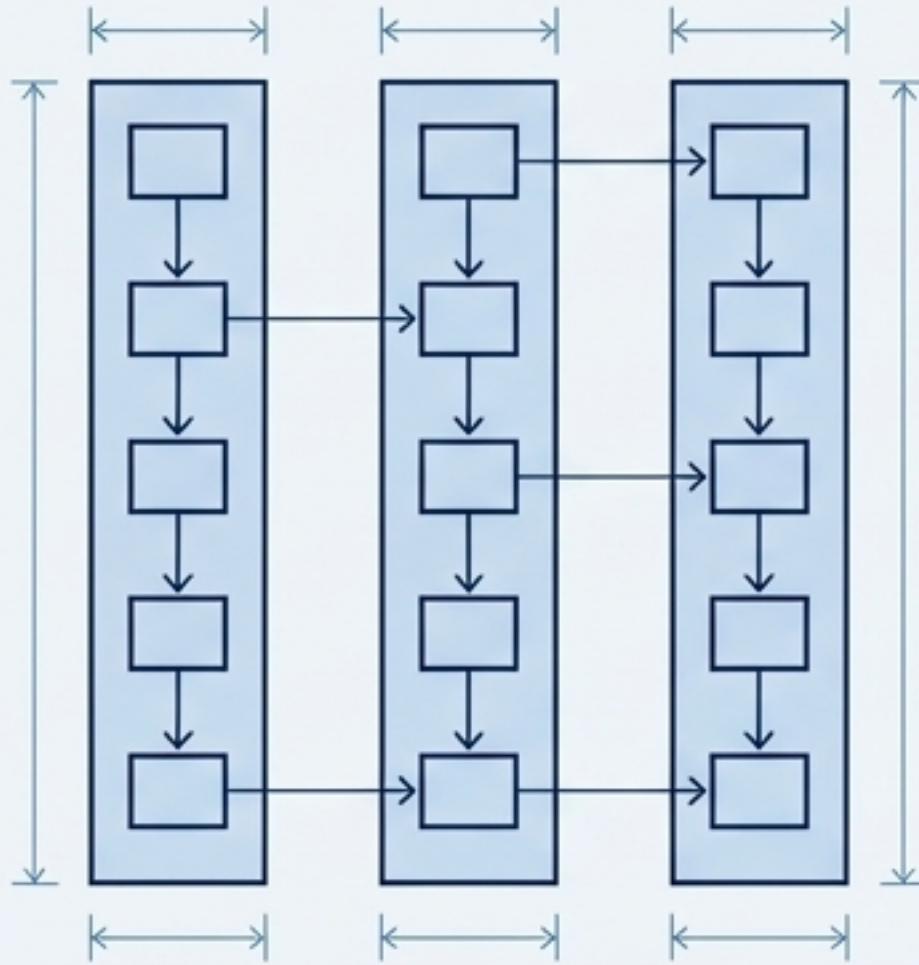

Anatomy of a Project: The WBS

The 4 Functional PM Activities

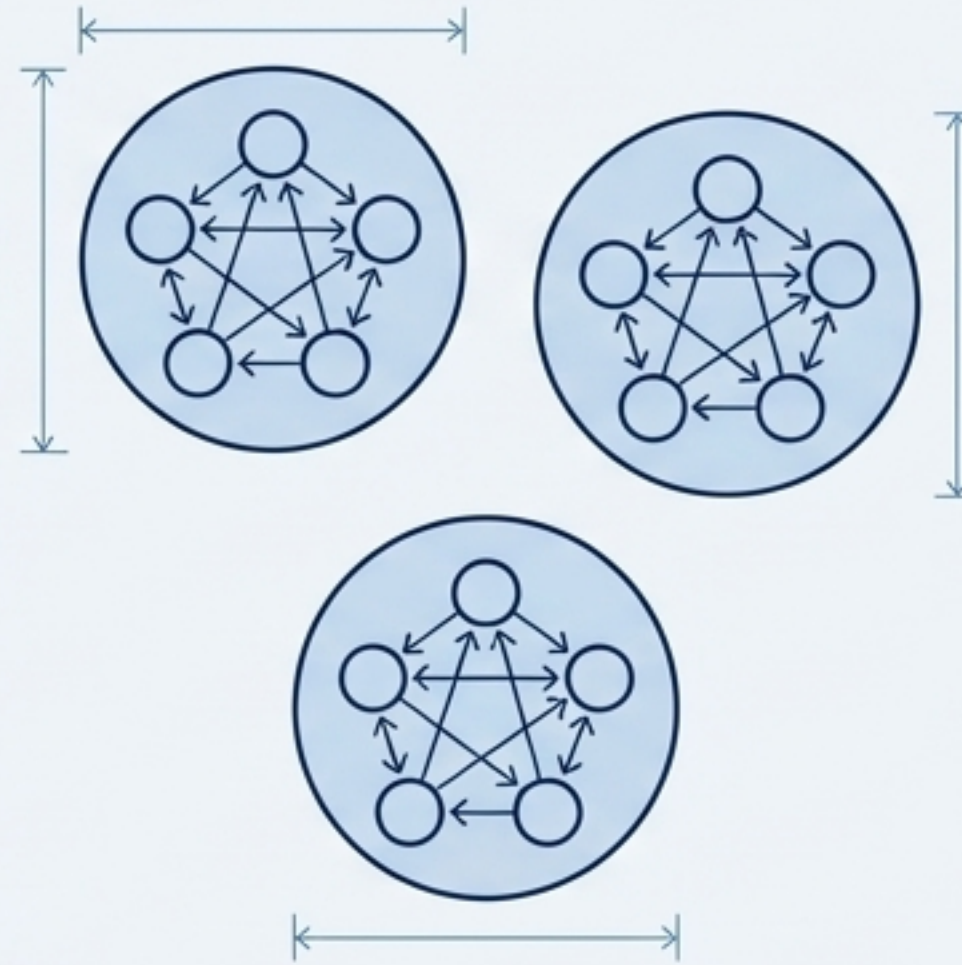

Topologies of Organization

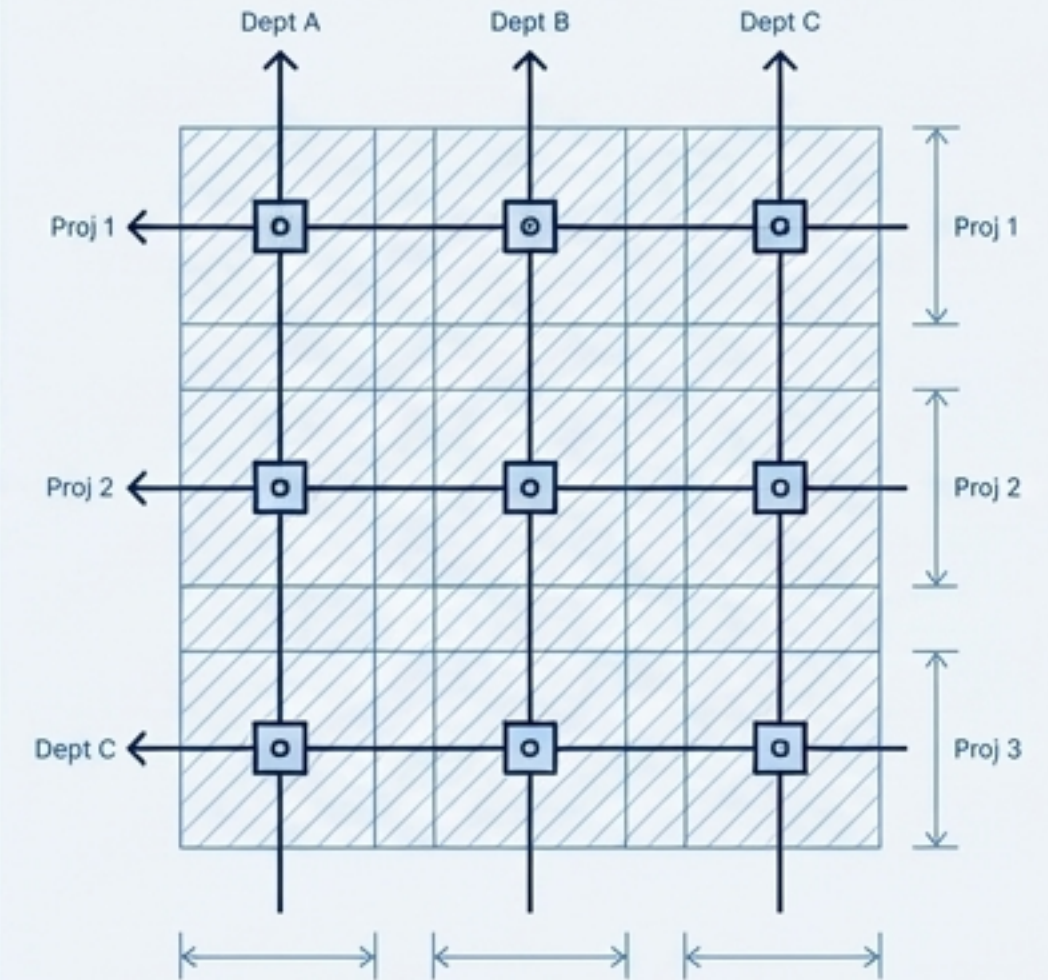

Functional (Line)

People grouped by specialty. Projects pass through a pipeline department by department. Fixed, permanent structure.

Project-Based

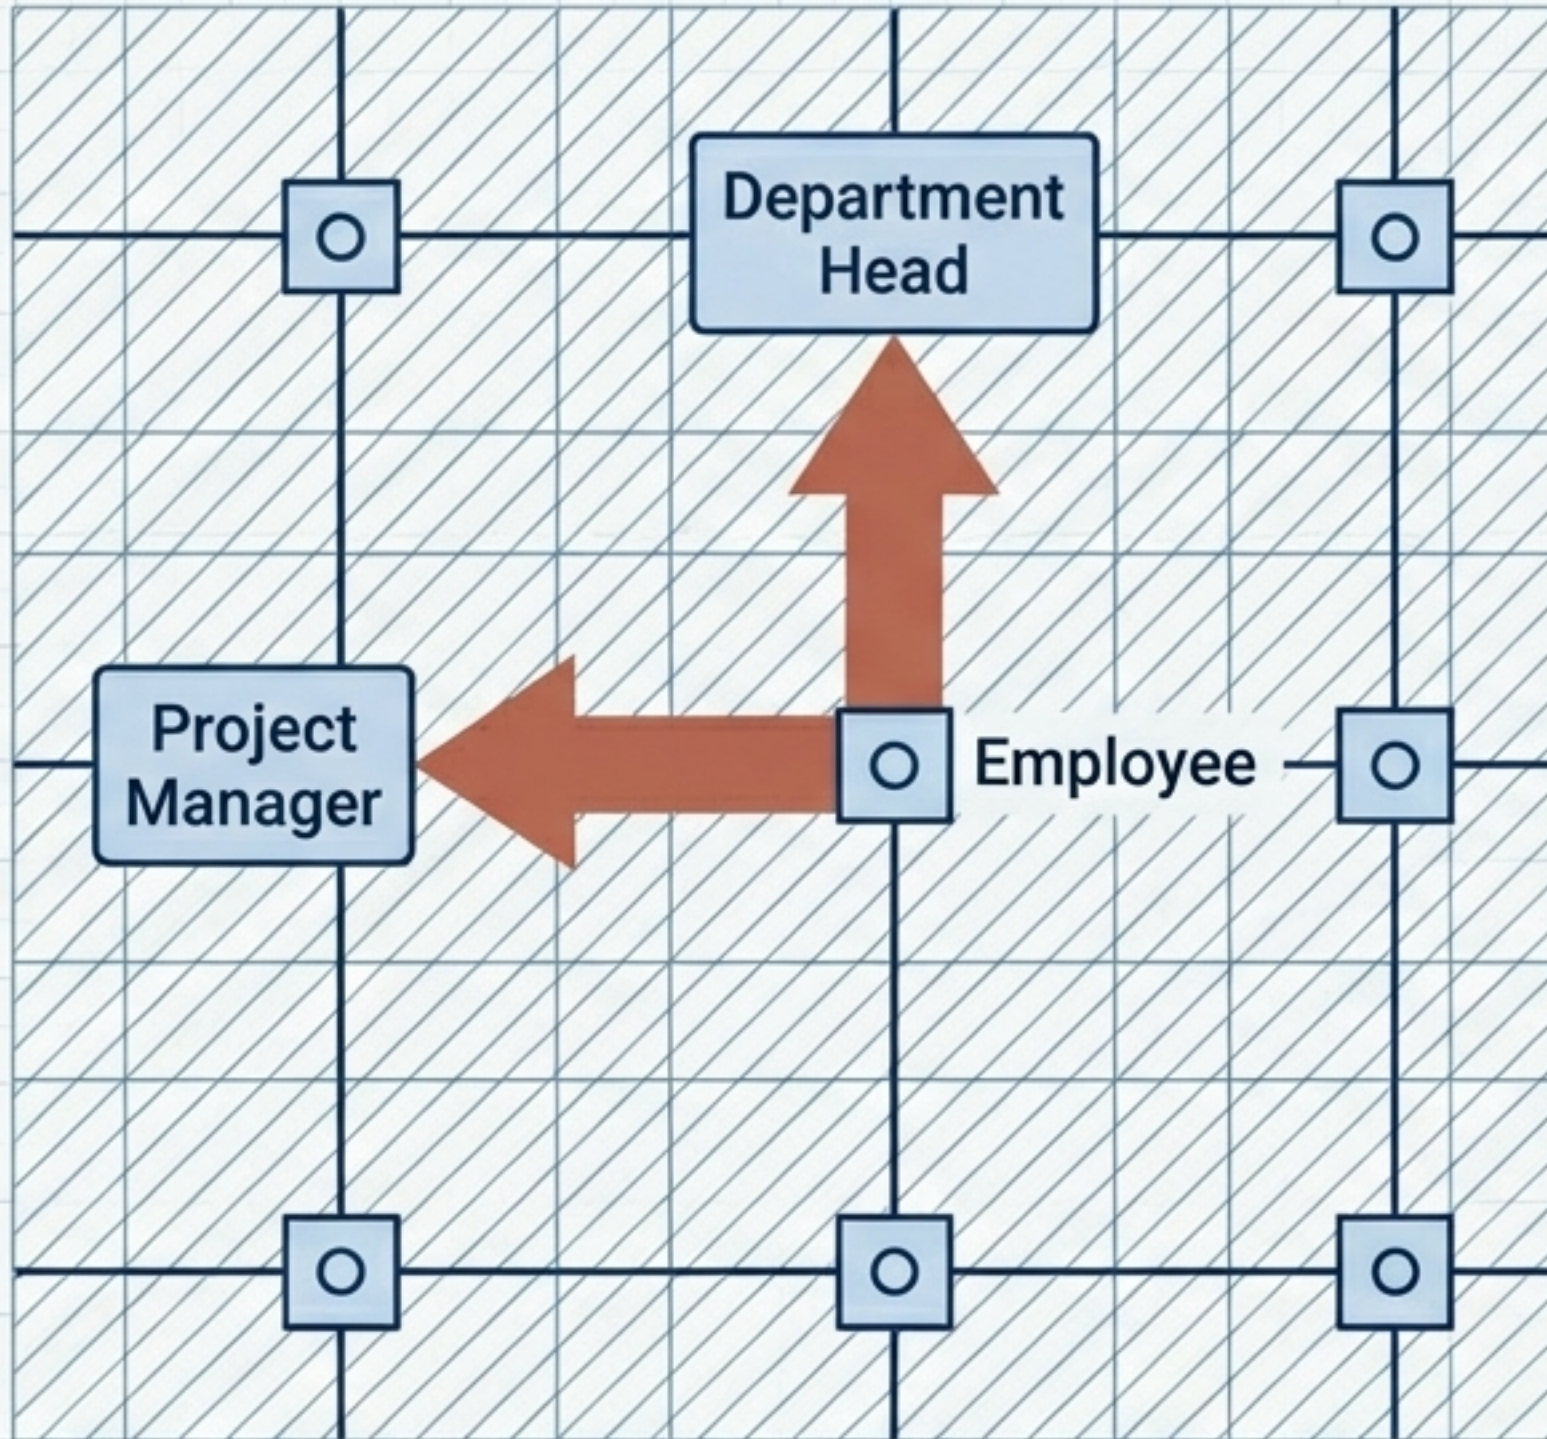

Participants assigned to one project at a time for its full duration. Dynamically changing; created on request, terminated on delivery.

Matrix

Combines functional and project-based. People work in a department AND on projects simultaneously. Allows rapid response and easy recruitment of skills.

The Matrix Trap

The Structural Flaw

Each person in a Matrix reports to TWO people simultaneously.

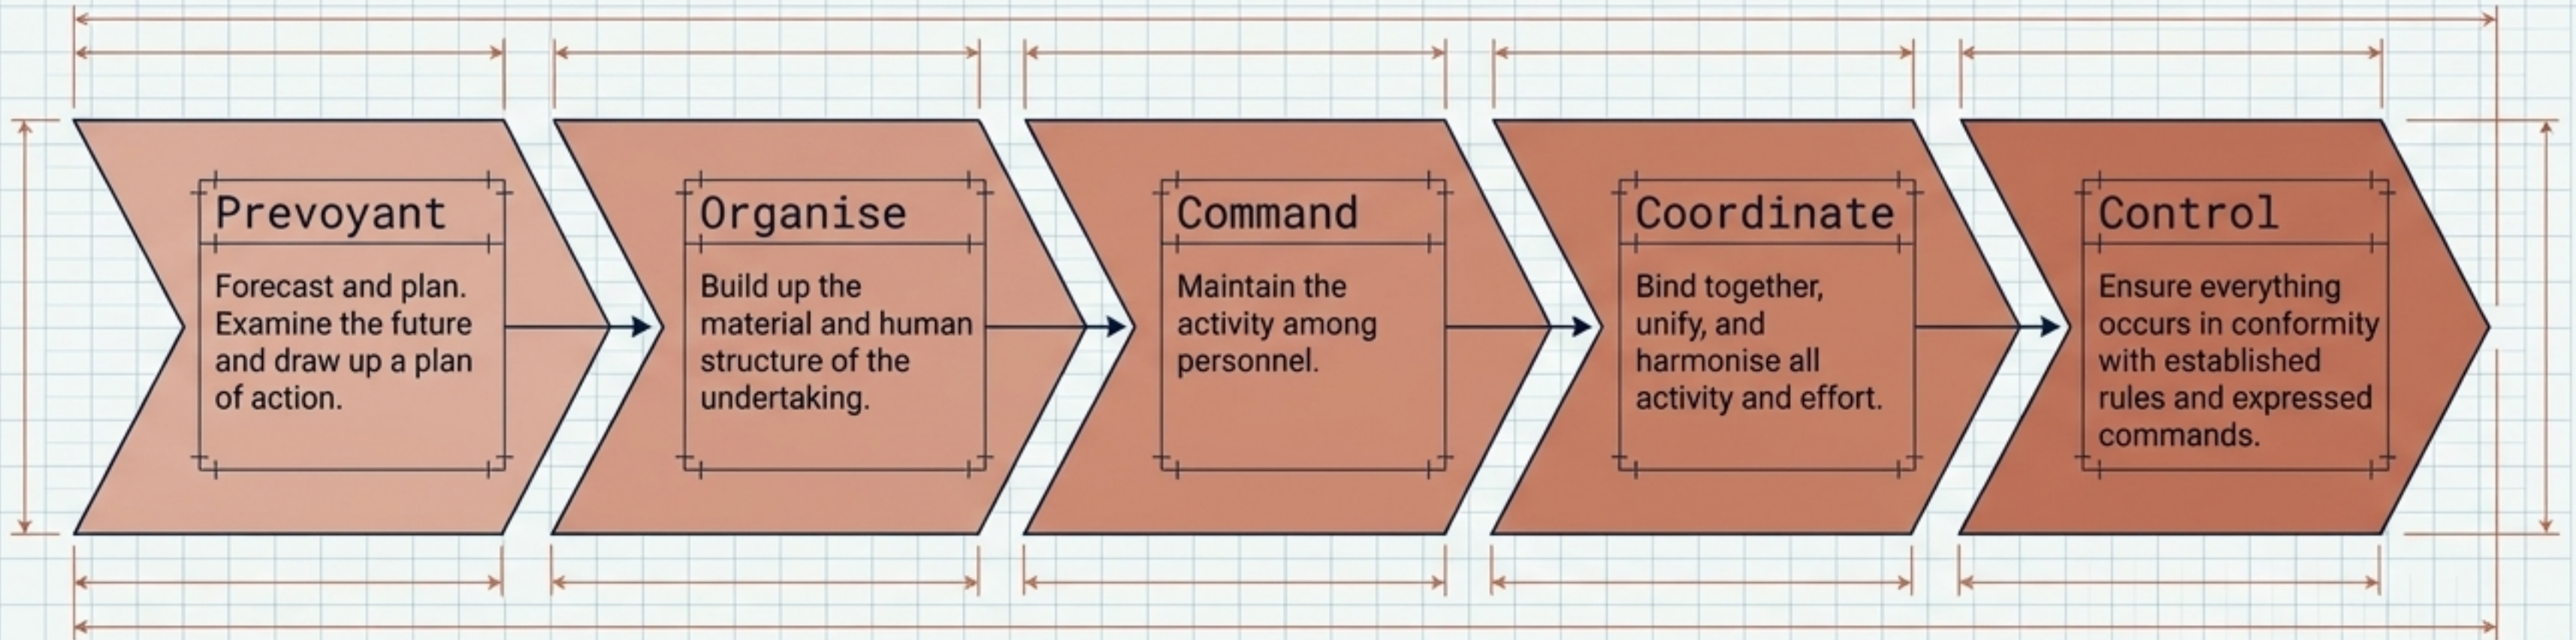

EXAM TRAP ALERT

This directly violates Henri Fayol's 'Unity of Command' principle.

Fayol's Rule: Each employee must have one, and only one, boss to avoid conflicting priorities and disciplinary chaos.

The Classical Architect: Henri Fayol

Fayol's 5 Management Functions

The Periodic Table of Management (14 Principles)

Structure / Power	Human / Team	Process / Rules
Authority: Right to give orders.	Subordination of individual interests: Work focus only.	Specialisation of labour: Continuous skill improvement.
Centralisation: Decisions made from the top.	Personnel tenure: Limited turnover; lifetime employment for good workers.	Discipline: No slacking or rule-bending.
Scalar chain: Formal top-to-bottom chain of command.	Initiative: Thinking out a plan and executing it.	Order: Everything/everyone in a prescribed place.
Unity of direction: One mind, one plan.	Esprit de corps: Harmony and cohesion.	Remuneration: Fair payment.
Unity of command: One and only one boss.		Equity: Equality of treatment.

Fayol Distinctions: The Compensation Trap

A critical analysis of two distinct but often confused management principles.

Remuneration

Definition: Employees receive fair payment for services.

Core Concept: Financial compensation. Not paying "what the company can get away with."

Equity

Definition: Equality of treatment across the workforce.

Core Concept: Fairness and justice in management behavior (but not necessarily identical treatment).

EXAM NOTE: Do not confuse fair pay (Remuneration) with fair treatment (Equity).

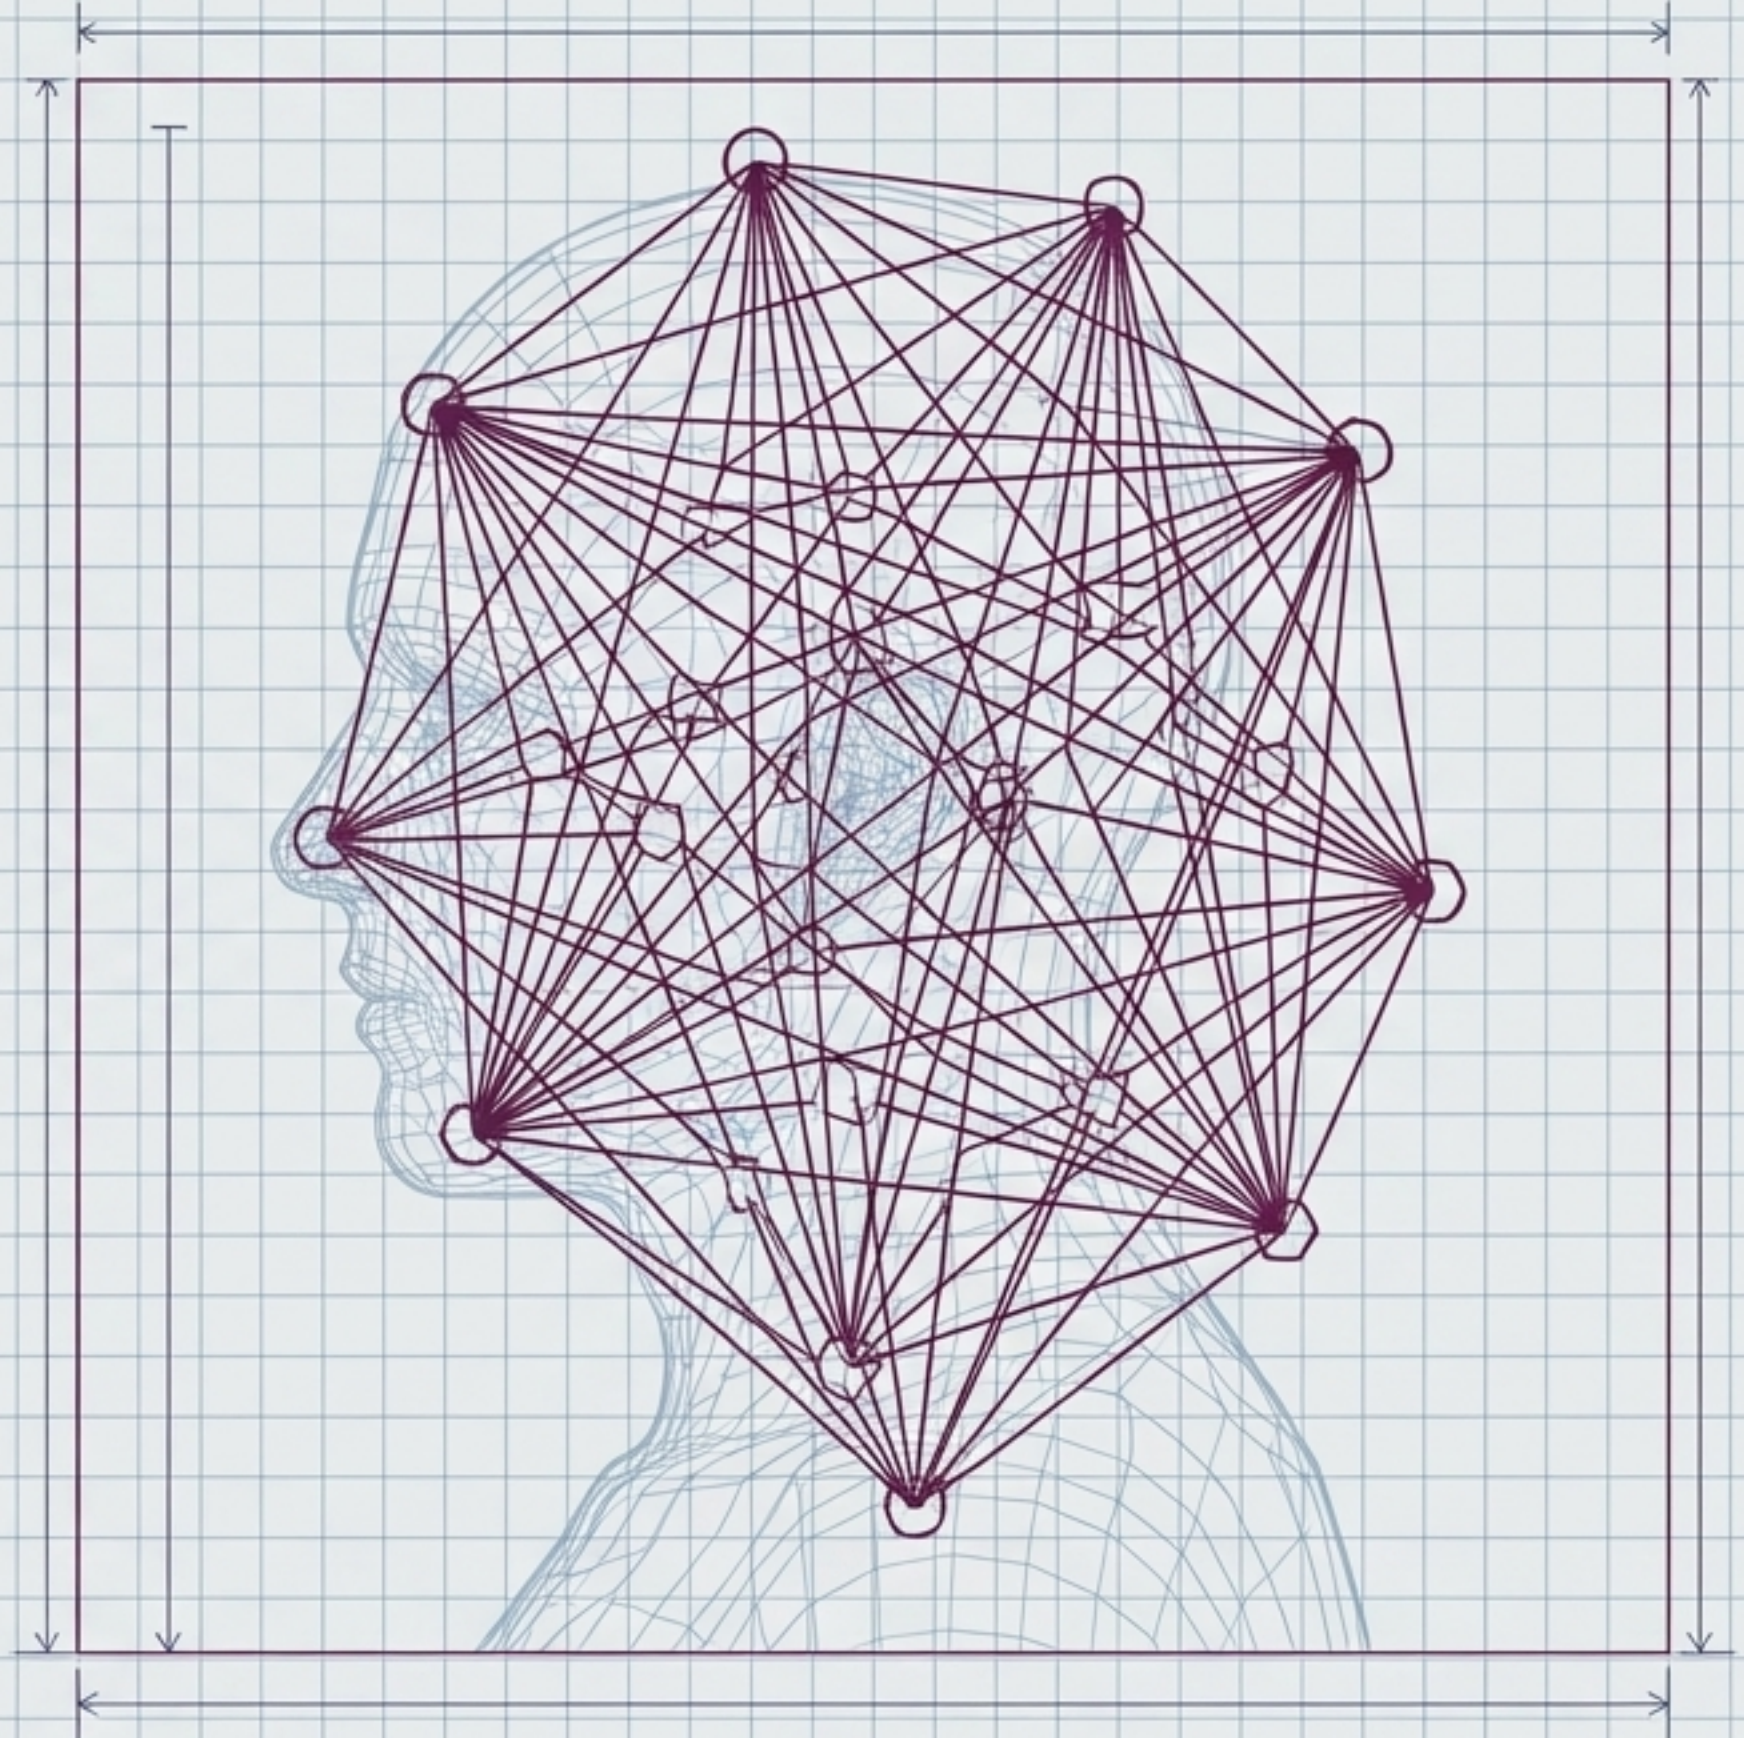

The Behavioral Reality: Henry Mintzberg

The Key Insight

Mintzberg observed what managers actually do, moving away from Fayol's clean, top-down planning.

The Gestalt

He identified 10 roles that are entirely inseparable. They form a gestalt—the integrated whole is greater than the sum of its parts. Managers operate in a complex web of overlapping responsibilities.

Mintzberg's 3 Pillars

Interpersonal Roles

Figurehead:
Ceremonial duties by virtue of position.

Leader:
Motivates/encourages team. Indirect in a matrix org.

Liaison:
Boundary-crossing contacts outside the vertical chain.

Informational Roles (~40% of a manager's time)

Monitor:
Scans environment for "soft" oral info (hearsay/gossip) to spot early problems.

Disseminator:
Distributes information to the team. Hoarding info causes team failure.

Spokesperson: Passes info outside the unit to higher-ups/clients.

Decisional Roles

Entrepreneur:
Initiates new projects.

Disturbance Handler:
Reacts to external pressures.

Resource Allocator:
Decides who gets what, including manager's time.

Negotiator:
Negotiates with stakeholders/vendors.

Mintzberg Distinctions: Action vs. Information

Decisional Trap: Proactive vs. Reactive

Entrepreneur (Proactive)

Initiated by the manager finding a new opportunity or good idea.

Disturbance Handler (Reactive)

Reacting to pressures completely outside their control (accidents, scope changes, key personnel loss).

Informational Trap: Inbound vs. Outbound

Monitor (Inbound)

Gathering and scanning the environment for information.

Disseminator (Outbound)

Sharing that gathered information downward to the project team.

Term 1 Synthesis: The Ultimate Cheat Sheet (10% Assessment)

Concept	Primary Definition	Contrasting Counter-Concept
Project vs. Operations	Temporary & Unique	Ongoing & Repetitive
Scope Evolution	Progressive Elaboration (Planned detail)	Scope Creep (Uncontrolled)
The Matrix Flaw	Matrix Org Structure	Violates Unity of Command (2 Bosses)
Fayol's Compensation	Remuneration (Fair Pay)	Equity (Equal Treatment)
Mintzberg's Decisional	Entrepreneur (Initiates)	Disturbance Handler (Reacts)
Mintzberg's Informational	Monitor (Gathers info)	Disseminator (Shares info)

Critical Stats: 40% of manager time = Informational. | PMs = High responsibility, low formal authority. | Good luck.
